7-3 How to Put Refrigerant in Refrigerant Container	155
7-3-1 How to put refrigerant in container before pump-down	155

### 1. Precautions

#### 1-1 Precautions for the Service

- Use the correct parts when changing the electric parts.
  - Please check the labels and notices for the model name, proper voltage, and proper current for the electric parts.
- Fully repair the connection for the types of harness when repairing the product after breakdown.
  - A faulty connection can cause irregular noise and problems.
- When disassembling or assembling, make sure that the product is laid down on a work cloth.
  - Doing so will prevent scratching to the exterior of the rear side of the product.
- Completely remove dust or foreign substances on the housing, connection, and inspection parts when performing repairs.
  - This can prevent fire hazards for tracking, short, etc.
- Please tighten the service valve of the outdoor unit and the valve cap of the charging valve as securely as possible by using a monkey spanner.
- Check whether the parts are properly and securely assembled after performing repairs.
  - These parts should be in the same condition as before the repair.

### 1-2 Precautions for the Static Electricity and PL

- Please carefully handle the PCB power terminal during repair and measurement when it is turned on since it is vulnerable to static electricity.
  - Please wear insulation gloves before performing PCB repair and measurement.
- Check if the place of installation is at least 2m away from electronic appliances such as TV, video players, and stereos.
  - This can cause irregular noise or degrade the picture quality.
- Please make sure the customer does not directly repair the product.
  - Arbitrary dismantling may result in electric shock or fire.

### 1-3 Precautions for the Safety

- Do not pull or touch the power plug or the subsidiary power switch with wet hands.
  - This may result in electric shock or fire.
- If the power line or the power plug is damaged, then it must be changed since this is a hazard.
- Do not bend the wire too much or position it so that it can be damaged by a heavy object on top.
  - This may result in electric shock or fire.
- The use of multiple electric outlets should be prohibited.
  - This may result in electric shock or fire.
- Ground the connection if it is necessary.
  - The connection must be grounded if there is any risk of electrical short due to water or moisture.
- Unplug the power or turn off the subsidiary power switch when changing or repairing electrical parts.
  - Doing so will prevent electric shock.
- Explain to workers that the battery for the remote control needs to be separated for storage purposes when the product will not be used for a long time.
  - This can cause a problem for the remote control since battery fluid may trickle out.

### 1-4 Precautions for Handling Refrigerant for Air Conditioner

#### **Environmental Cautions: Air pollution due to gas release**

#### Safety Cautions

If liquid gas is released, then body parts that come into contact with it may experience frostbite/blister/numbness. If a large amount of gas is released, then suffocation may occur due to lack of oxygen. If the released gas is heated, then noxious gas may be produced by combustion.

#### Container Handling Cautions

Do not subject container to physical shock or overheating. (Flowage is possible while moving within the regulated pressure.)

### 1-5 Precautions for Welding the Air Conditioner Pipe

- Dangerous or flammable objects around the pipe must be removed before the welding.
- If the refrigerant is kept inside the product or the pipe, then remove the refrigerant prior to welding.

  If the welding is carried out while the refrigerant is kept inside, the welding cannot be properly performed. This will also produce noxious gas that is a health hazard. This leakage will also explode with the refrigerant and oil due to an increase in the refrigerant pressure, posing a danger to workers.
- Please remove the oxide produced inside the pipe during the welding with nitrogen gas. Using another gas may cause harm to the product or others.

### 1-6 Precautions for Additional Supplement of Air Conditioner Refrigerant

- Precisely calculate the refrigerant by using a scale and S-net, and proceed with the test operation.
   Excessive supplement can cause harm to the product since it can cause an inflow of the liquid refrigerant into the compressor.
- Do not heat the refrigerant container for a forced injection.

This may cause harm to the product or others since the refrigerant container may burst.

Do not operate the product after removing the product safety pressure switch and sensor.

If the product is blocked inside, then this may cause harm to the product or others due to the excess pressure increase of the refrigerant gas.

### 1-7 Other Precautions

 There should be no leakage of the pipes after installation. When withdrawing the refrigerant, the compressor should be stopped before removing the connecting pipe.

If the compressor is operating while the refrigerant pipe is not correctly connected and the service valve is opened, then air and other substances can enter the pipe. The interior of the refrigerant cycle may then build up excessive high pressure resulting in explosion and damage.

### 4. Troubleshooting

### 4-1 Check-up Window Description

No.	Function	No.	Function
1	CN22 download (PC) (SMW200-10 black)	6	Set up the number of connected outdoor units
2	MICOM. download (AS-PRO) (SMW200-07P white)	7	For checking indoor unit communication (YW396-02P red)
3	ERROR DISPLAY	8	Transmitter 12V (YW396-02P blue)
4	State Check (SMW250-04P red)	9	Outdoor Unit Tact Switch
5	EEPROM SOCKET	10	Outdoor Unit Dip Switch

### **4-2 Service Operation**

### 4-2-1 Special Operation

Key input of the outdoor unit when the service enters the operation mode.

K1 (Number of press)	Key operation	Display on segment
1 time	Refrigerant charging in Heating mode	K, 1, BLANK, BLANK
2 times	Trial operation in Heating mode	K, 2, BLANK, BLANK
3 times	Pump out in Heating mode (Outdoor unit address 1)	K, 3, BLANK, 1
4 times	Pump out in Heating mode (Outdoor unit address 2)	K, 3, BLANK, 2
5 times	Pump out in Heating mode (Outdoor unit address 3)	K, 3, BLANK, 3
6 times	Pump out in Heating mode (Outdoor unit address 4)	K, 3, BLANK, 4
7 times	Vacuumig (Outdoor unit address 1)	K, 4, BLANK, 1
8 times	Vacuumig (Outdoor unit address 2)	K, 4, BLANK, 2
9 times	Vacuumig (Outdoor unit address 3)	K, 4, BLANK, 3
10 times	Vacuumig (Outdoor unit address 4)	K, 4, BLANK, 4
11 times	Vacuuming (All outdoor units)	K, 4, BLANK, A
12 times	End Key operation	-
Press and hold 1 time	Auto trial operation	K, K, BLANK, BLANK

K2 (Number of press)	Key operation	Display on segment
1 time	Refrigerant charging in Cooling mode	K, 5, BLANK, BLANK
2 times	Trial operation in Cooling mode	K, 6, BLANK, BLANK
3 times	Pump down all units in Cooling mode	K, 7, BLANK, BLANK
4 times	H/R: Checking the pipe connection H/P: Automatic setting of operation mode (Cooling/Heating) for trail operation	K, 8, BLANK, BLANK
5 times	Checking the amount of refrigerant	K 9 X X (Display of last two digits may differ depending on the progress)
6 times	Discharge mode of DC link voltage	K, A, BLANK, BLANK
7 times	Forced defrost operation	K, B, BLANK, BLANK
8 times	Forced oil collection	K, C, BLANK, BLANK
9 times	End Key operation	-

 $<sup>\</sup>times$  Inv1 & Inv2 voltage during discharge mode are displayed alternately.

XWhen you run the repair and replacement of the PCB should work after the power is turned off, the DC voltage discharge. (Natural discharge until Please wait for at least 15 minutes.)

If an error occurs, the discharge mode may not work properly. In particular, E464 & E364 is power devices can be damaged. Therefore, the discharge mode, do not use.

### **■** Commissioning

► After initial installation, stable operation for a certain period of time limited to operation conditions.

	Cooling	Heating	
Method of Entry	K2 Tact Switch twice	K2 Tact Switch twice	
Compressor	Normal operation, but the maximu	Normal operation, but the maximum frequency limit (differ by model)	
Indoor Unit	Whole operation (The set temperature=3°C) Whole operation (The set temperature=40°C)		
Outdoor fan and valves	Normally control conduct		
Operation time	Min:60 minutes, Max:10 hours		
Etc.	Exceed the maximum operating time at stops and waits.     Protection and control, self-diagnosis is performed.		

### **■** Refrigerant filling operation

Operation to filling the refrigerant compressor was fixed at a certain frequency.

	Cooling	Heating		
Method of Entry	K2 Tact Switch one time K1 Tact Switch one time			
Compressor	Starting frequency (Mild Start frequency) operation			
Indoor Unit	Whole operation (The set temperature=3°C) Whole operation (The set temperature=40			
Outdoor fan and valves	Normally control conduct			
Operation time	60 minutes			
Etc.	During the filling operation does not enter the special operation, such as oil recovery, defrost.			

#### **■** Heating Pump Out

- Operation for the repair of the Individual outdoor unit, the outdoor unit refrigerant emissions to the indoor part.
- Liquid pipe service valve and the gas pipe service valve operation, the operator manually need to close.
- ► Observe low pressure using View Mode of K4 button if compressor operate.

  If low pressure goes down below about 0.2 MPa.g: Immediately lock the gas side service valve, Pump Out operation is shut down.

  (Pump out operation shut down: K1 button once more press or K3 button one time press)
- ► If operation of low pressure goes down below 0.1 MPa.g: Will be stopped automatically for the protection of the compressor.

How to Initiate	K1 Tact Switch 3 times~6 times		
Compressor	60Hz		
Indoor Unit	Whole Operation (The set temperature=40°C)		
4Way Valve	ON (Heating Mode)		
Outdoor Fan	Maximum air flow		
Main EEV	Operation side: 700 Step (Stop side: 0 step)		
Maximum Operation Time	10 minutes		
Protection Control	Conduct the discharge temperature, high pressure control. (Low pressure protection control is not carried out)  X Low pressure is outside normal limits: Operation is shut down after gas pipe manually closed.		
Etc.	Entry after safety start. (Only the corresponding Outdoor Unit operation.)  To pump out more than 2: Except communication between Outdoor Unit of relevant set after working for one, remainder set makes Pump Out add.		

#### **■** Cooling Pump Down

- ► Recover the refrigerant of Indoor Unit and Piping to outdoor side.
- Liquid pipe service valve and the gas pipe service valve operation, the operator manually need to close.
- ▶ If the installation of the long pipe: Any refrigerant into the outdoor unit can not be recovered, therefore should use a separate container.
- Observe low pressure using View Mode of K4 button if compressor operate.
  If low pressure goes down below about 0.2 MPa.g: Immediately lock the gas side service valve, Pump Out operation is shut down.
  (Pump out operation shut down: K1 button once more press or K3 button one time press)
- ▶ If operation of low pressure goes down below 0.1 MPa.g: Will be stopped automatically for the protection of the compressor.

How to Initiate	K2 Tact Switch 3 times
Compressor	Address No.1 Outdoor Unit - 60Hz (Other Outdoor Unit COMP OFF)
Indoor Unit	Whole Operation (The set temperature=3°C)
4Way Valve	OFF (Cooling Mode)
Outdoor Fan	Maximum air flow
Main EEV	Operation side : 2000 Step , Stop side : 2000 step
Maximum Operation Time	30 minutes
Etc.	Does not conduct the operation of the special operation, and protection control.  Pressure and temperature is outside normal limits: Operation is shut down after gas pipe manually closed.

#### **■ Vacuum Operation**

Operation to facilitate vacuum to open the valve after the Outdoor Unit repair.

How to Initiate	K1 Tact Switch 7 times~11 times
Compressor	OFF
Indoor Unit/Outdoor Fan	OFF
4Way Valve	OFF
Valves	Open all valves maximum
Etc.	If not turn off the vacuum mode, the start of normal operation is prohibited.

### **■** Piping Inspection Operation

- ► Operation mode to check the status of the piping between the MCU and the indoor unit.
- ► Heat Pump Model : Outdoor temperature is more than 15°C / Cooling commissioning start
  Outdoor temperature is less than 15°C / Heating commissioning start

### **■** Discharge Mode Operation

- Outdoor power is turned off, the Inverter PCB and Fan PCB charging a high DC voltage, so dangerous to touch.
  - To replace the PCB, first turn off the power and the begin if DC voltage is discharged.
  - If not use the discharge mode, the discharge time of about 15 minutes takes.
  - If an error occurs, the discharge mode may not properly run. (Wait until natural discharge.)
  - In particular, E 464, E364, power devices may be damaged, therefore do not use the discharge mode.
- Block the Inverter PCB 3-phase relay after connected the power, and through compressor, DC voltage is discharging.
  - INV1 and INV2 DC voltage during discharge mode are displayed alternately.
  - Discharge mode Display (Rotate the three page display, as shown below.)
    - 'K' 'A' '' → DC Link Volt1 (For example, 120[V] 0 1 2 0 display)
    - → DCLinkVolt2 (For example, 120[V] 0 1 2 0 display) → 'K' 'A' '' → DC Link Volt1 ...
- ► Discharge is complete, the power of the Inverter PCB and Fan PCB is being blocked, communication function is blocked, E206 will occur.
- ► If want operation again after complete discharge mode : Restart after K3 key to Reset or Power Reset.

### **■** Forced defrost operation

Forced defrost operation: Is operation when Frost Formation occurs in the outdoor. (When carried out the service)

Method of Entry	K2 Tact Switch 6 times
Start pattern	Heating commissioning pattern
Defrost start	Defrost start: It is after 10 minutes which Safety Start finishes.
Defrost off	General defrost operation conditions are the same as.
Etc.	Defrost shut down and stop the normal pattern of the outdoor unit stop.

### **■** Forced oil recovery operation

Forced oil recovery operation: Oil recovery in the outdoor unit for the purpose of moving, installation if necessary.

Method of Entry	K2 Tact Switch 7 times
Start pattern	Outdoor temperature is more than 10°C: Cooling commissioning Outdoor temperature is less than 10°C: Heating commissioning
Oil recovery start	Oil recovery start: It is after 10 minutes which Safety Start finishes.
Etc.	Oil recovery shut down and stop the normal pattern of the outdoor unit stop.

### 4-3 Troubleshooting

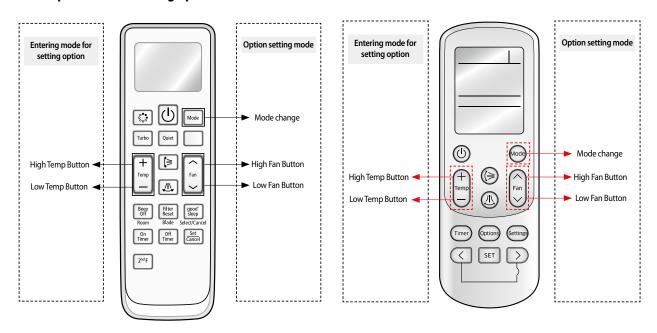

#### 4-3-1 Setting Option Setup Method

#### 4-3-1-1 PCB option code input method

► Set the indoor unit address and installation option with remote controller option.

Set the each option separately since you cannot set the ADDRESS setting and indoor unit installation setting option at the same time. You need to set twice when setting indoor unit address and installation option.

### ■ The procedure of setting option

### Step 1 Entering mode to set option

- 1. Remove batteries from the remote controller.
- 2. Insert batteries and enter the option setting mode while pressing High Temp button and Low Temp button 🗄 .
- 3. Check if you have entered the option setting status.

### Step 2 The procedure of option setting

After entering the option setting status, select the option as listed below.

- The total number of available options are 24: SEG1 to SEG24.
- Because SEG1, SEG7, SEG13, and SEG19 are the page options used by the previous remote control models, the modes to set values for these options are skipped automatically.
- Set a 2-digit value for each option pair in the followinig order: SEG2 and SEG3 → SEG4 and SEG5 → SEG6 and SEG8 → SEG9 and SEG10 → SEG11 and SEG12 → SEG14 and SEG15 → SEG16 and SEG17 → SEG18 and SEG20 → SEG21 and SEG22 → SEG23 and SEG24.

SEG1	SEG2	SEG3	SEG4	SEG5	SEG6	SEG7	SEG8	SEG9	SEG10	SEG11	SEG12
0	Х	Х	Х	Х	Х	1	Х	Х	Х	Х	Х
SEG13	SEG14	SEG15	SEG16	SEG17	SEG18	SEG19	SEG20	SEG21	SEG22	SEG23	SEG24
2	X	χ	X	Χ	χ	3	χ	X	X	Χ	χ

On(SEG1~12)	Off(SEG13~24)
Auto	Auto
	I=00

### ■ The procedure of setting option

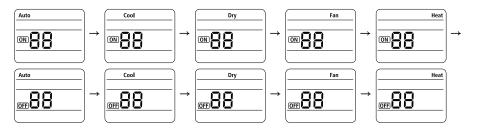

Option setting	Status
<b>1. Setting SEG2, SEG3 option</b> Press Low Fan button( $\lor$ ) to enter SEG2 value. Press High Fan button( $\land$ ) to enter SEG3 value. Each time you press the button, $\exists \to \exists \to \ \exists \to \exists \text{ will be selected in rotation.}$	SEG2 SEG3
2. Setting Cool mode  Press Mode button to be changed to Cool mode in the ON status.	Cod ON B B
3. Setting SEG4, SEG5 option  Press Low Fan button(∨) to enter SEG4 value.  Press High Fan button(∧) to enter SEG5 value.  Each time you press the button, □→□→ E → E will be selected in rotation.	Cool  COOL  SEG4  SEG5
4. Setting Dry mode Press Mode button to be changed to DRY mode in the ON status.	
<b>5. Setting SEG6, SEG8 option</b> Press Low Fan button( $\vee$ ) to enter SEG6 value. Press High Fan button( $\wedge$ ) to enter SEG8 value. Each time you press the button, $\mathbb{B} \to \mathbb{B} \to \mathbb{B}$ will be selected in rotation.	SEG6 SEG8
6. Setting Fan mode  Press Mode button to be changed to FAN mode in the ON status.	[080]
7. Setting SEG9, SEG10 option  Press Low Fan button(∨) to enter SEG9 value.  Press High Fan button(∧) to enter SEG10 value.  Each time you press the button, ⊕→ ⊕→ E → F will be selected in rotation.	SEG9 SEG10
8. Setting Heat mode Press Mode button to be changed to HEAT mode in the ON status.	Heat OND B
9. Setting SEG11, SEG12 option  Press Low Fan button( $\vee$ ) to enter SEG11 value.  Press High Fan button( $\wedge$ ) to enter SEG12 value.  Each time you press the button, $\mathbb{B} \to \mathbb{B} \to \dots \to \mathbb{B}$ will be selected in rotation.	SEG11 SEG12
10. Setting Auto mode  Mode Press Mode button to be changed to AUTO mode in the OFF status.	Auto OFF 88

### ■ The procedure of setting option (cont.)

Option setting	Status
11. Setting SEG14, SEG15 option  Press Low Fan button( $\lor$ ) to enter SEG14 value.  Press High Fan button( $\land$ ) to enter SEG15 value.  Each time you press the button, $\Box \to \Box \to \to \Xi$ will be selected in rotation.	SEG14  Auto  OFF  OFF  OFF  SEG15
12. Setting Cool mode  Mode Press Mode button to be change to Cool mode in the OFF status.	Cool
<b>13. Setting SEG16, SEG17 option</b> Press Low Fan button( $\lor$ ) to enter SEG16 value. Press High Fan button( $\land$ ) to enter SEG17 value. Each time you press the button, $\Box \to \Box \to \to \Xi$ will be selected in rotation.	SEG16 SEG17
14. Setting Dry mode  Press Mode button to be change to Dry mode in the OFF status.	Dry OFF 8
<b>15. Setting SEG18, SEG20 option</b> Press Low Fan button( $\lor$ ) to enter SEG18 value. Press High Fan button( $\land$ ) to enter SEG20 value. Each time you press the button, $\Box \to \Box \to \to \Xi$ will be selected in rotation.	SEG18 SEG20
16. Setting Fan mode  Press Mode button to be change to Fan mode in the OFF status.	Fan OFFI B B
17. Setting SEG21, SEG22 option  Press Low Fan button( $\vee$ ) to enter SEG21 value.  Press High Fan button( $\wedge$ ) to enter SEG22 value.  Each time you press the button, $\square \to \square \to \square$ will be selected in rotation.	SEG21 SEG22
18. Setting Heat mode  Press Mode button to be change to HEAT mode in the OFF status.	THEAT OF BE
<b>19. Setting SEG23, SEG24 mode</b> Press Low Fan button( $\lor$ ) to enter SEG23 value. Press High Fan button( $\land$ ) to enter SEG24 value. Each time you press the button, $\exists \to \exists \to \dots \exists \to \exists$ will be selected in rotation.	Heat Heat OFF O

### Step 3 Check the option you have set

After setting option, press [Mode] button to check whether the option code you input is correct or not.

### Step 4 Input option

Press operation button with the direction of remote control for set. For the correct option setting, you must input the option twice.

### Step 5 Check operation

- 1. Reset the indoor unit by pressing the RESET button of indoor unit or outdoor unit.
- 2. Take the batteries out of the remote controller and insert them again and then press the operation button.

### - Setting an indoor unit address and installation option

#### ■ Setting an indoor unit installation option (suitable for the condition of each installation location)

- 1. Check whether power is supplied or not.
  - When the indoor unit is not plugged in, there should be additional power supply in the indoor unit.
- 2. The panel(display) should be connected to an indoor unit to receive option.
- 3. Set the installation option according to the installation condition of an air conditioner.
  - The default setting of an indoor unit installation option is 020010-100000-200000-300000.
  - Individual control of a remote controller(SEG20) is the function that controls an indoor unit individually when there is more than one indoor unit.

Indoor Unit

SEG1	SEG2	SEG3	SEG4	SEG5	SEG6
0	2	RESERVED	Exterior temperature sensor	Central control	FAN RPM compensation
SEG7	SEG8	SEG9	SEG10	SEG11	SEG12
1	Drain pump	Hot water heater	Electronic heater	Opening the electronic expansion valve	Master / Slave
SEG13	SEG14	SEG15	SEG16	SEG17	SEG18
2	External control	External control output	S-Plasma ion	Buzzer	Number of hours using filter
SEG19	SEG20	SEG21	SEG22	SEG23	SEG24
3	Individual control of a remote controller	Heating setting compensation	EEV opening of an indoor unit stopped during oil return or Defrost operation.	-	Human sensor

- ▶ 1WAY/2WAY/4WAY MODEL: Drain pump(SEG8) will be set to 'USE + 3minute delay' even if the drain pump is set to 0.
- ▶ 1 WAY/2WAY/4WAY,DUCT MODEL: Number of hours using filter(SEG18) will be set to '1000hour' even if the SEG18 is set to exept for 2 or 6.
- ▶ If you input a number other than 0~4 of the individual control of the indoor unit(SEG20), the indoor is set as indoor 1.
- ► SEG5 central control option is basically set as 1 (Use), so you don't need to set the central control option additionally.

  However, if the central control is not connected but it doesn't indicate an error message, you need to set the central control option as 0 (Disuse) to exclude the indoor unit from the central control.

### Installation options for the 02 series

SEG1	SEG2	SEG3	SEG4	SEG5	SEG6	
0	2	-	Use of external temperature sensor / Minimizing fan operation when thermostat is off	Use of central control	Compensation of the fan RPM	
SEG7	SEG8	SEG9	SEG10	SEG11	SEG12	
1	Use of drain pump	Use of hot water heater	-	EEV step when heating stops	-	
SEG13	SEG14	SEG15	SEG16	SEG17	SEG18	
2	Use of external control	Setting the output of external control / External heater On or Off signal	-	Buzzer control	Maximum filter usage time	
SEG19	SEG20	SEG21	SEG22	SEG23	SEG24	
3	Individual control with remote control	Heating setting compensation offset / Removing condensated water in the Heat mode	EEV step of stopped unit during the oil return or the defrost mode	Motion detection sensor	Cycle time of Swing	

- Even if you set the Use of drain pump (SEG8) option to 0, it is automatically set to 2 (the drain pump is used with 3 minute delay).
- If you set the Maximum filter usage time (SEG18) option to a value other than 2 and 6, it is automatically set to 2 (1000 hours).
- If you set an option to a value that is out of range specified above, the option is automatically set to 0 by default.
- The SEG5 option (Use of central control) is set to 1 (Use) by default. Therefore, you don't need to set the SEG5 option additionally. Note that even if the central control system is not connected, no errors occur. If you want a specific indoor unit not to be controlled by the central control system, set the SEG option of that indoor unit to 0 (Disuse).
- The external output of SEG15 is generated via MIM-B14 connection. (Refer to the manual of MIM-B14.)
- If you set the Individual control with remote control (SEG20) option to a value other than 0 to 4, it is automatically set to 0 (Indoor 1).

	Indication	Details	Indication	Details	Indication	Det  Heating setting compensation offset	Removing condensated water in the Heat mode	Indication	Details	Indication	Details	Indication	Details
Indication and					0	Default (*5)	Disuse	0	Default	0	Disuse	0	34 seconds (default)
details	3	3	0 or 1	Indoor 1	1	2℃	Disuse	1	Oil return or Noise	1	Turn out in 30 min. without motion	1	30 seconds
			2	Indoor 2	2	5℃	Disuse	1	decreasing in defrost mode	2	Turn out in 60 min. without motion	2	38 seconds

		3	Indoor 3	3	Default (*5)	Use (*6)			2	Turn out in 60 min. without motion		
				4	2℃	Use (*6)			3	Turn out in 120 min. without motion		
									5	Turn out in 180 min. without motion		
Indication and details	3	4	Indoor 4				1	Oil return or Noise decreasing in defrost mode	6	Turn out in 60 min. without motion or advanced function (*1)	2	38 seconds
				5	5℃	Use (*6)			7	Turn out in 120 min. without motion or advanced function (*1)		
									8	Turn out in 180 min. without motion or advanced function (*1)		

- (\*1) Advanced function: Either controlling the cooling or heating current or power saving with motion detection.
- (\*2) Minimizing fan operation when thermostat is off:
  - The fan operates for 20 seconds at an interval of 5 minutes in the Heat mode.
- (\*3) 1: The fan is turned on continually when the hot water heater is turned on,
  - 3: The fan is turned off when the hot water heater is turned on with cooling only indoor unit. (Cooling only indoor unit: To use this option, install the Mode Select switch (MCM-C200) on the outdoor unit and fix it to the Cool mode.)
- (\*4) When the following 2 or 3 is used as external heater On or Off signal, the signal for monitoring external contact control will not be output.
  - 2: The fan is turned on continually when the external heater is turned on,
  - 3: The fan is turned off when the external heater is turned on with cooling only indoor unit (Cooling only indoor unit: To use this option, install the Mode Select switch (MCM-C200) on the outdoor unit and fix it to the Cool mode.)
- (\*5) Default setting value: 5 °C
- (\*6) If the air conditioner operates in the Heat mode immediately after finishing the cooling operation, the condensated water in the drain pan becomes water steam by the heat of the indoor unit heat exchanger. Since the water steam might be condensed on the indoor unit, which may fall into a living space, use this function to remove the water steam out of the indoor unit by operating the fan (for maximum 20 minutes) although the indoor unit is turned off after the Cool mode is turned to the Heat mode.

## 4-3-3 What to check before diagnosis

## 4-3-3-1 Lamp combination expression method display (cassette type indoor unit)

## - Global 4way cassette type

#### **■** Error detection and restart

- When error occurs during operation, indicate a problem with LED flashes, and no other operations but LED stops.
- When restarting operation with remote controller or switch, it will determine the appropriate error mode after normal operation.

## ■ LED lamp display with error detection

			LED D	isplay

## - Global 4way cassette type

## ■ LED lamp display with error detection (cont.)

			LED D	isplay	
Abnormal condition	Error	Operation	Defrost	Timer	Filter
	code	Ů	*	(-)	
EEPROM option error	E163	•	•	•	•
Error due to incompatible indoor unit	E164	•	•	×	•

●:On ①:Flickering ×:Off

- If you turn off the air conditioner when the LED is flickering, the LED is also turned off.
- If you re-operate the air conditioner, it operates normally at first, then detect an error again.
- When E108 error occurs, change the address and reset the system.
- Ex.) When address of the indoor unit #1 and #2 are set as 5, address of the indoor unit #1 will become 5 and indoor unit #2 will display E108, A002.

## 4-3-4 Number Display Method (Outdoor Unit, MCU, Cable remote control, wall-mount, etc.)

## **■** How to Display Integrated Error Code

## ► Meanings of First Alphabetical Character / Number of Error Code

Displayed alphabet		Explanation						
E	When displaying Error 101~700	Vhen displaying Error 101~700						
7	When displaying Error 701~800	nen displaying Error 701~800						
<i></i>	When E206 occurs	Displays address of subordinate within the set C001 : HUB, C002: FAN, C003: INV1, C004: INV2						
	When MCU error occurs	Displays address of MCU Ex) C100: MCU address 0, C101: MCU address 1, C102: MCU address 2						
Ц	When displaying outdoor unit address Ex) U200: Outdoor unit 1, U201: Outdoor unit 2, U202: Outdoor unit 3, U203: Indoor unit 4							
R	When displaying indoor unit address Ex) A000: Indoor unit address 0, A001: Indoor unit address 1, A002: Indoor unit address 2							

## ► Order of Error Display

Classification	Error display method	Display Example
Display method for error that occurred in indoor unit	Error Number → Indoor unit address → Error Number, repeat display	E471 → A002 → E471 → A002
Display method for error that occurred in outdoor unit and other methods of error display	Error Number → Outdoor unit address → Error Number, repeat display	E471 → U200 → E471 → U200 E206 → C001 → E206 → C002

## ► Error code related indoor unit

CODE	Explanation
E-101	Indoor unit communication error. Indoor unit can not receive any data from outdoor unit.
E-102	Communication error between indoor unit and outdoor unit. Displayed in indoor unit
E-108	Error due to repeated address setting (When 2 or more devices has same address within the network)
E-109	Communication address not confirmed other outdoor unit communication error that is not on the above list
E-110	Communication error between Hydro unit HT(Main PBA) and Control kit PBA(Detection from the Control kit)
E-121	Error on indoor temperature sensor of indoor unit (Short or Open)
E-122	Error on EVA IN sensor of indoor unit (Short or Open)
E-123	Error on EVA OUT sensor of indoor unit (Short or Open)
E-128	EVA IN temperature sensor of indoor unit is detached from EVA IN pipe
E-129	EVA OUT temperature sensor of indoor unit is detached from EVA OUT pipe
E-130	Heat exchanger in/out sensors of indoor unit are detached
E-135	RPM feedback error of indoor unit's cleaning fan
E-151	Error due to opened EEV of indoor unit (2nd detection)
E-152	Error due to closed EEV of indoor unit (2nd detection)
E-153	Error on floating switch of indoor unit (2nd detection)
E-154	RPM feedback error of indoor unit
E-161	Mixed operation mode error of indoor unit; When outdoor unit is getting ready to operate in cooling (or heating) and some of the indoor unit is trying to operate in heating (or cooling) mode
E-162	EEPROM error of MICOM (Physical problem of parts/circuit)
E-163	Indoor unit's remote controller option input is Incorrect or missing. Outdo or unit EEPROM data error
E-180	Simultaneous opening of cooling/heating MCU SOL V/V (1st detection)
E-181	Simultaneous opening of cooling/heating MCU SOL V/V (2nd detection)
E-185	Cross wiring error between communication and power cable of indoor unit
E-186	Connection error or problem on SPi
E-190	No temperature changes in EVA IN during pipe inspection or changes in temperature is seen in indoor unit with wrong address
E-191	No temperature changes in EVA OUT during pipe inspection or changes in temperature is seen in indoor unit with wrong address
E-198	Error due to disconnected thermal fuse of indoor unit
E-201	Communication error between indoor and outdoor units (installation number setting error, repeated indoor unit address, indoor unit communication cable error)
E-202	Communication error between indoor and outdoor units (Communication error on all indoor unit, outdoor unit communication cable error)
E-203	Communication error between main and sub outdoor units
E-205	Communication error on all PBA within the outdoor unit C-Box, communication cable error
E-206	E206-C001: HUB PBA communication error / E206-C002: FAN PBA communication error E206-C003: INV1 PBA communication error / E206-C004: INV2 PBA communication error

## ► Error code related to the Communications / Settings / HW (cont.)

CODE	Explanation
E-211	When single indoor unit uses 2 MCU ports that are not in series
E-212	If the rotary switch (on the MCU) for address setting of the indoor unit has 3 or more of the same address
E-213	When total number of indoor units assigned to MCU is same as actual number of installed indoor units but there is indoor unit that is not installed even though it is assigned on MCU
E-214	When number of MCU is not set correctly on the outdoor unit or when two or more MCU was installed some of them have the same address
E-215	When two different MCU's have same address value on the rotary switch
E-216	When indoor unit is not installed to a MCU port but the switch on the port is set to On
E-217	hen indoor unit is connected to a MCU port but indoor unit is assigned to a MCU and the switch on the port is set to Off
E-218	When there's at least one or more actual number of indoor unit connection compared to number of indoor units assigned to MCU
E-219	Error on temperature sensor located on MCU intercooler inlet (Short or Open)
E-220	Error on temperature sensor located on MCU intercooler outlet (Short or Open)
E-221	Error on outdoor temperature sensor of outdoor unit (Short or open)
E-231	Error on COND OUT temperature sensor of main outdoor unit (Short or Open)
E-241	COND OUT sensor is detached
E-251	Error on discharge temperature sensor of compressor 1 (Short or Open)
E-257	Error on discharge temperature sensor of compressor 2 (Short or Open)
E-262	Discharge temperature sensor of compressor 1 is detached from the sensor holder on the pipe
E-263	Discharge temperature sensor of compressor 2 is detached from the sensor holder on the pipe
E-266	Top sensor of compressor 1 is detached
E-267	Top sensor of compressor 2 is detached
E-269	Suction temperature sensor is detached from the sensor holder on the pipe
E-276	Error on top sensor of compressor 1 (Short or Open)
E-277	Error on top sensor of compressor 2 (Short or Open)
E-291	Refrigerant leakage or error on high pressure sensor (Short or Open)
E-296	Refrigerant leakage or error on low pressure sensor (Short or Open)
E-308	Error on suction temperature sensor (Short or Open)

## ► Error code related to the Communications / Settings / HW (cont.)

CODE	Explanation
E-311	Error on temperature sensor of double layer pipe/liquid pipe(sub heat exchanger) (Short or Open)
E-321	Error on EVI (ESC) IN temperature sensor (Short or Open)
E-322	Error on EVI (ESC) OUT temperature sensor (Short or Open)
E-323	Error on suction sensor 2 (Short or Open)

E-505	Error due to self diagnosis of high pressure sensor
E-506	Error due to self diagnosis of low pressure sensor
E-560	Outdoor unit's option switch setting error (when iinappropriate option switch is on)
E-563	Error due to module installation of indoor unit with old version (Micom version needs to be checked)
E-573	Error due to using single type outdoor unit in a module installation
E-601	Communication error between remote controller and the DVM Hydro unit / Hydro unit HT
E-602	Communication error between master and slave remote controller
E-604	Tracking error between remote controller and the DVM Hydro unit / Hydro unit HT
E-618	Error due to exceeding maximum numbers of Hydro unit installation (16 units)
E-627	Error due to exceeding maximum numbers of wired remote controller installation (2 units)
E-633	Error caused by installing mixed models
E-653	Remote controller's temperature sensor is disconnected or has problem
E-654	Data error on remote controller (Memory read/write error)

## ► Error code related to the Communications / Settings / HW (cont.)

CODE	Explanation
E-702	Error due to closed EEV of indoor unit (1st detection)
E-703	Error due to opened EEV of indoor unit (1st detection)
E-901	Error on the sensor of water inlet pipe (Short or Open)
E-902	Error on the sensor of water outlet pipe (Short or Open)
E-904	Error on water tank (Short or open)
E-907	Error due to pipe rupture protection
E-908	Error due to freeze prevention(Re-operation is possible)
E-909	Error due to freeze prevention(Re-operation is impossible)
E-910	Water temperature sensor on water outlet pipe is detached
E-911	Flow switch off error, When the switch is turned off within 10 seconds after a pump starts its operation(Re-operation is possible)
E-913	Six times detection for Flow Switch Error(Re-operation is not possible)
E-914	Error due to incorrect thermostat connection
E-915	Error on DC fan(Non-operating)
E-917	Water Tank Sensor Configutation Error
UP	Trial operation incompleted (UnPrepared) - It will be cleared when trial operation was executed for 1 hour or when automatic inspection is completed

## 4-4 Appropriate Measures for Different Symptom

## 4-4-1 Outdoor Unit Operation Flow

#### Commissioning if it is not running - UP is displayed

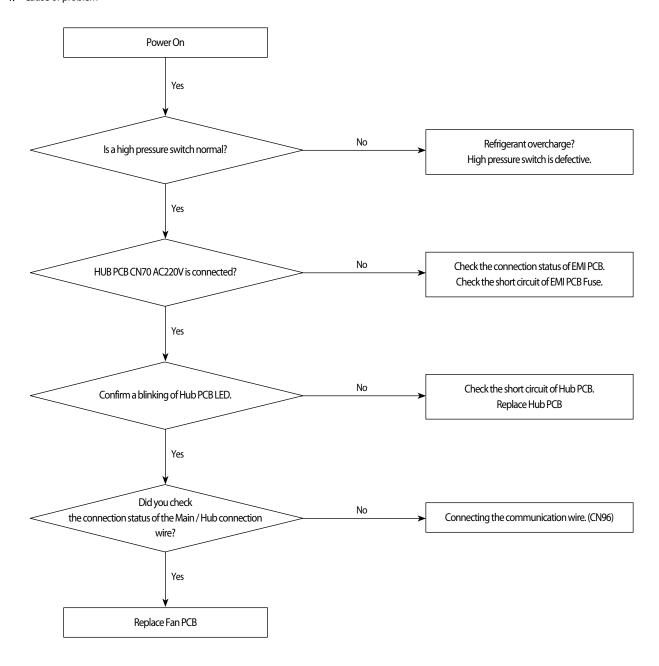

Prior to starting the air conditioning operation after the initial installation and automatic commissioning is carried out. This process, the stable operation to protect the system and verify the defect of the product.

- Tracking is complete and after the initial installation, if you do not have a history of commissioning is completed, UP will be displayed.
- $2. \, Execute \, the \, automatic \, commissioning \, by \, Tact \, Switch.$
- 3. UP display disappears after commissioning is complete, normal operation is possible.
- 4. Automatic commissioning is completed, if there is a history, normal operation execution immediately.

## 4-4-2 Main PCB has no power phenomenon

Outdoor unit display	Main PCB has no power phenomenon (7-seg does not blink)
Judgment Method	Hub PCB power and connection wire to detect.
Cause of problem	HUB PCB connector wire defects and the connection is not. Main PCB defective. Hub PCB defective. High pressure switch operation

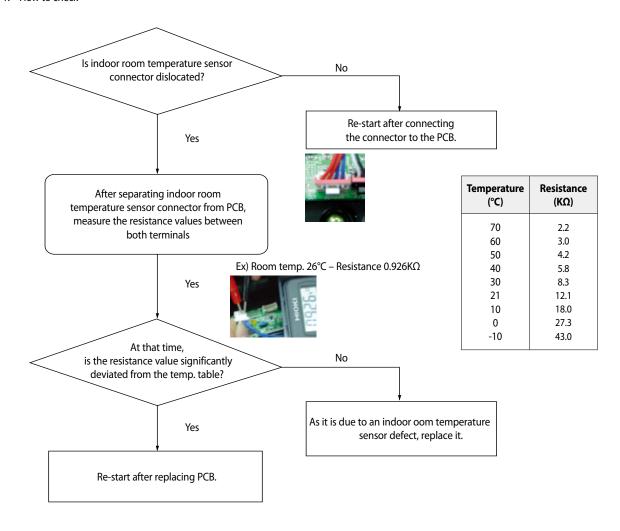

#### 1. Cause of problem

## 4-4-3 Indoor Unit ROOM sensor Error (Open/Short)

Outdoor unit display	Eli	J /	<b>↔</b> /7	xxx	(x x x	: The a	address	of the	e error	occur	red in	door u	nit)

Lifoi details	Exchanger EVA Out sensor					

#### 2. How to check

## 4-4-8 imultaneous Indoor Heat Exchanger's EVA IN, OUT sensor dislocation error (Open/Short)

#### 1. How to diagnose

## 1) During Cooling Operation

Tcond, out - Tair, out > 3°C	ОК
Tair, in - Teva, out > 4℃	NO
Tair, in - Teva, out > 4℃	NO
Compressor in operation & Indoor unit operation & Thermo On	ОК
Error details	Simultaneous indoor heat exchanger's EVA IN, OUT sensor dislocation error

#### 2) During Heating operation

Average high pressure > 25kg/cm²	ОК
Average low pressure > 8.2kg/cm²	ОК
Teva, out - Tair, out ≥ 3°C	NO
Tair, in - Teva, out ≥ 2°C	NO
Tcond, out - Tair, out < -2°C	ОК
Compressor in operation & Indoor unit operation & Thermo On	ОК
Error details	Simultaneous Indoor heat exchanger's EVA IN, OUT sensor dislocation error

### 2. How to check

 $Check\ if\ an\ Indoor\ heat\ exchanger's\ EVA\ IN,\ OUT\ sensor\ has\ been\ dislocated\ then\ is\ correct\ after\ assembling.$ 

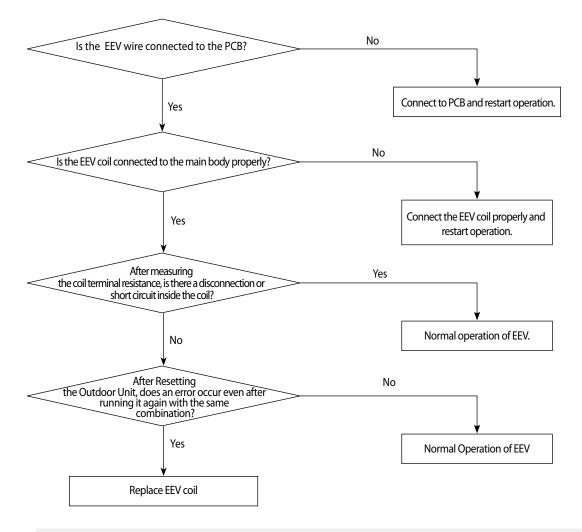

# 4-4-9 Electronic Expansion Valve opening malfunction (2nd stage) - $\mathcal{E}$ 135

	1st detection: P703 (Outdoor Unit display only)
Outdoor unit display	2nd detection : $E \not \exists 5 \leftrightarrow R \times \times$
Indoor unit display	$\times$ (Operation) $\times$ (Timer) $\bullet$ (Fan) $\times$ (Filter) $\times$ (Defrost)
Criteria	• Refer to the judgment method below.
Cause of problem	• Faulty Indoor Unit EEV action. (Refrigerant will leak into the stopped Indoor Unit.)

#### 1. How to diagnose

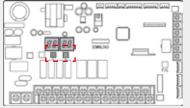

- During Cooling operation, the temperature of the inlet or outlet of stopped Heat Exchanger is kept lower than  $0^{\circ}$ C for more than 20 minutes without cessation.
- Hydro Unit: During the defrost operation, detection from stop-side Indoor Unit. (Temperature of the inlet of Heat Exchanger is kept lower than 0°C for more than 20 minutes without cessation.)

#### 2. How to check

## \* How to turn off the Hydro Unit E151

- Hydro Unit PCB k1, k2 switch: At the same time push for more than 4 seconds.
- After resolving the cause of the error, restart operation.
  (Excessive reset operation, can cause damage to the Heat Exchanger.)

#### 4-4-10 Breakdown of EEV (2nd)

#### 1. How to diagnose

Detect only on cooling operation. (No detection during heating operation.)

During cooling operation, the temperature of the inlet or outlet ducts of heat exchanger is kept below 0°C for more than 20 minutes without cessation

#### 2. How to check

- 1) Check if the wire of electronic expansion valve is correctly connected to the PCB of indoor unit.
- 2) Check if the coil of an electronic expansion valve is correctly plugged into the main body.
- 3) Check if there is any rust on the surface of the electronic expansion valve with naked eyes then check the resistance between each terminal to find any wire breaking or short circuit.
- 4) Press the RESET KEY (K3) of the outdoor unit then see if the same error occurs.
  - In case of closure problem, operate the indoor unit in which the error has occurred.
  - In case of opening problem, please do not operate the indoor unit in which the error has occurred.
- 5) If there is no problem with the above checkup items, replace the electronic expansion valve of the troubled indoor unit.
  - As an electronic expansion valve replacement is tricky work that requires collecting refrigerants in all systems, please check the above items before replacement.

#### 4-4-11 Problem with EEV closure (2nd)

#### 1. How to diagnose

1) During Cooling operation(Each of the below conditions have to be met for at least 20 minutes.)

Tcond, out - Tair, out > 3°C	ОК
Tair, in - Teva, out > 4℃	NO
Tair, in - Teva, out > 4℃	NO
Compressor in operation & Indoor unit operation & Thermo On	ОК
Error details	Electrically operated valve closure breakdown

- 2) During heating operation (must satisfy all conditions below)
  - When more than 2 indoor units are on Thermo On heating operation.
  - When average high pressure is over 18kg/cm<sup>2</sup>
  - 5 minutes after finishing Safety Start
  - Keep Indoor units' T(Eva\_In)<T(Room) +3°C and T(Eva\_Out)<T(Room) +3°C condition for more than 5 minutes

#### 2. How to check

- 1) Check if the wire of electronic expansion valve is correctly connected to the PCB of indoor unit.
- 2) Check if the coil of electronic expansion valve is correctly plugged into the main body.
- 3) Check if there is any rust on the surface of the electronic expansion valve with naked eye then check the resistance between each terminal to find any wire breaking or short circuit.
- 4) Press the RESET KEY (K3) of the outdoor unit then see if the same error occurs.
  - In case of closure problem, operate the indoor unit in which the error has occurred.
  - In case of opening problem, please do not operate the indoor unit in which the error has occurred.
- 5) If there is no problem with the above checkup items, replace the electronic expansion valve of the troubled indoor unit.
  - As electronic expansion valve replacement is tricky work that requires collecting refrigerants in all systems, please check the above items before replacement.

Criteria	• Refer	• Refer to the judgment method below.																
Cause of problem	• The o	The operational error of the fan motor of No. XXX indoor unit																

## 1. How to diagnose

1) Occurs when RPM valve fails to feedback to MICOM at a PID control-type fan motor

#### 2. How to check

- 1) Check HALL IC connector that carries out feedback of RPM value.
- 2) If a fan motor operation capacitor is a PCB separating type, check the connection terminal.
- 3) Check the operational status of the fan motor.
- 4) If there is no problem with the above checkup items, replace the PCB.

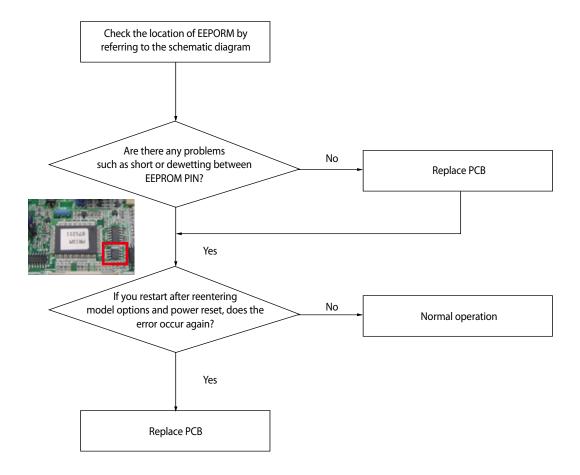

## 4-4-16 Mixed operation Error (Only applicable to Heat Pump Model/Not to HR model)

- Mixed operation error is applicable only to Heat Pump Model and not to HR model.
- Mixed operation error is not due to a product problem but is displayed when the operational mode input in an indoor unit is different from current operational status (other indoor unit's operational mode).
- Check the operational mode of outdoor unit or other indoor unit then re-enter or stop the operational mode of the relevant unit.
- If it is necessary to apply a different operational mode to an indoor unit from others, please stop other indoor units then operate the indoor unit.

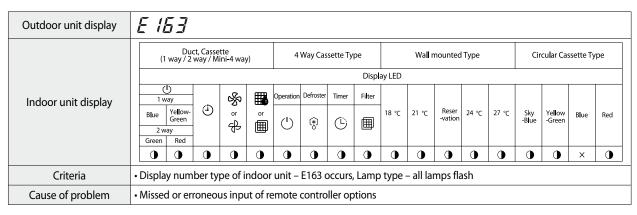

## 4-4-17 EEPROM error

#### 1. How to check

## 4-4-18 Option error of the Remote Controller for an Indoor Unit

• Check relevant remote controller options for each model then enter correct options

#### 4-4-19 Error due to confused use of Fahrenheit and Celsius

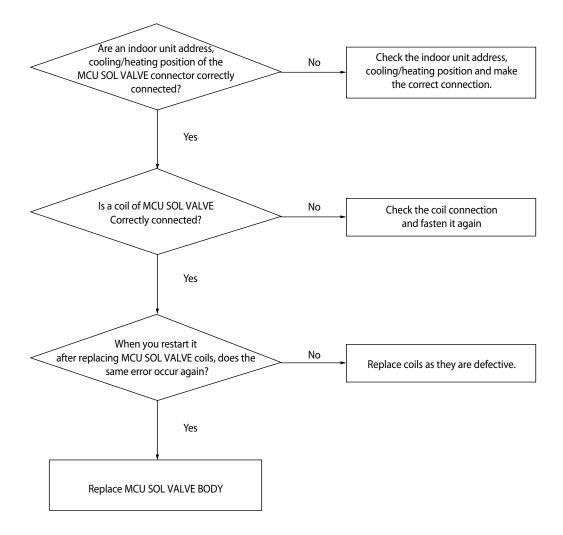

Outdoor unit display	E 170
Indoor unit display	$\times$ (Operation) $\bigcirc$ (Timer) $\bigcirc$ (Fan) $\bigcirc$ (Filter) $\times$ (Defrost)
Criteria	Display number type of indoor unit – E170 occurs, Lamp type – all lamps flash     Occurs in an indoor unit with Celsius setting
Cause of problem	Missed input of remote controller options

- Check relevant remote controller options for each model then enter correct options
- As this happens only in a Celsius setting model, it is necessary to reenter option codes for error-free models in a region where Celsius is used.

## 4-4-20 Simultaneous opening of Cooling/heating MCU SOL Valves 1st/2nd

- During the first detection, as the system restarts after making an automatic stop to check a problem with the system
- During the second detection, please refer to the following check-up methods.

#### 1. How to check

# 4-4-21 Error due to incorrect Indoor Unit Power/Communication Cable Connection

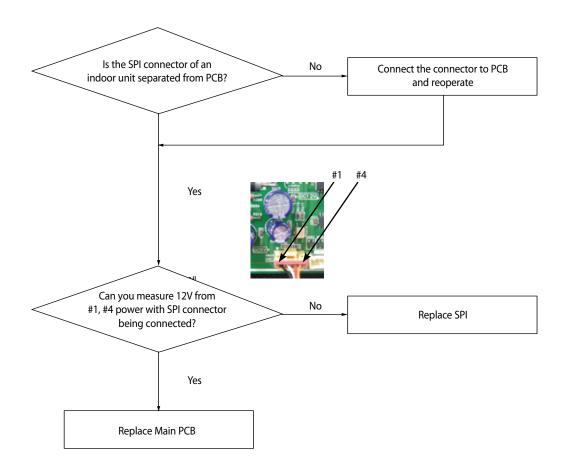

Outdoor unit display	E 18	15											
		Wall mount											
la da an coste di salace			LED Displays										
Indoor unit display		18°C	' /										
		×	× ×										
Criteria	• Check f	ck for Power input(220V) for the Terminal block(F1/F2).											
Cause of problem	• Apply p	Apply power (220V) to the terminal of the indoor unit communication block (F1/F2)											

 $\bullet$  Check for disconnected line after turning off the Main power.

## 4-4-22 SPI Feedback Error

Outdoor unit display	E 186									
Indoor unit display	Operation)									
Criteria	Check if the output of SPI Feedback is 12V									
Cause of problem	• SPI defect									

#### 1. How to check

## 4-4-23 Outdoor Unit Pipe Inspection Error

Outdoor unit display	## ## ## ## ## ## ## ## ## ## ## ## ##
Indoor unit display	-
Criteria	Refer to the judgment method below
Cause of problem	• The liquid pipe/gas pipe of the indoor unit is not correctly connected to the port set in MCU.

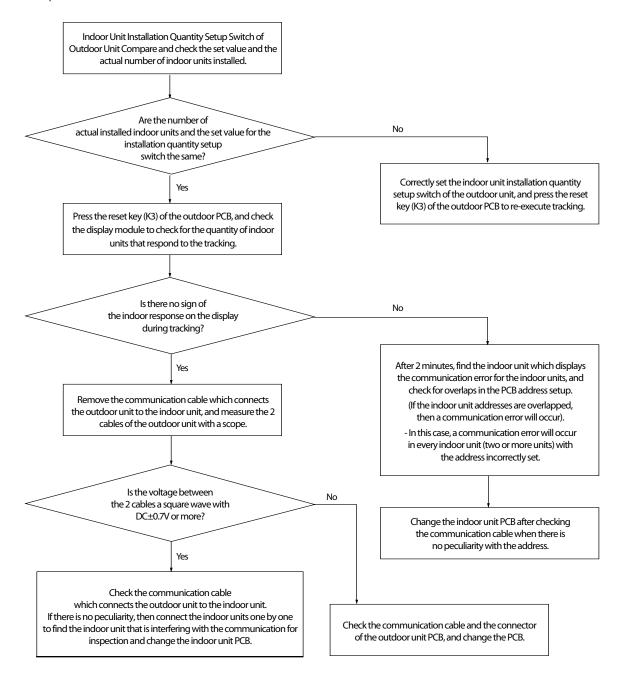

## 1. Judgment Method

- Check if the indoor address settings are the same for the address of the indoor units connected to each port of the MCU and the address of the indoor units of the relevant MCU ports.
- Check if the indoor unit usage setup switch is turned on for the MCU port connected to the indoor unit.

#### 4-4-24 Communication Error between Indoor and Outdoor Units during Tracking

# 4-4-46 $\mathcal{E}\mathcal{Z}\mathcal{S}\mathcal{S}$ : Dislocation error of Compressor SUMP Temperature (oil temperature) Sensor

Outdoor unit display	<b>E255</b> (digital compressor or fixed compressor 1)
Indoor unit display	×(Operation)
Criteria	• Refer to how to determine below
Cause of problem	• Sump (oil) temperature sensor dislocation error

## 1. How to diagnose

1) If the Sump temperature right before the start of compressor = Tsump.ini, current compressor's SUMP temp = Tsump. real, When the difference between Tsump.ini and Tsump.real is an absolute value so that it cannot be more than 2°C, In other words, the condition of Tsump.real-Tsump.ini<2°C has been satisfied for 60 minutes since a compressor started, it is diagnosed as an error.

After 60 minutes of compressor operation, there will be no Sump sensor dislocation detection.

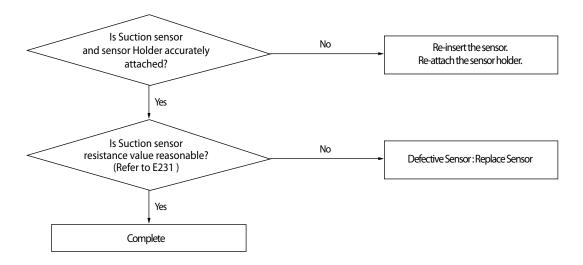

#### 2. How to check

1) Check if a sensor of the relevant compressor has been dislocated in accordance with error code, assemble and correct the error.

# 4-4-47 💆 📆 🖫 : Suction Temperature sensor breakaway error

### 1. Cause of problem

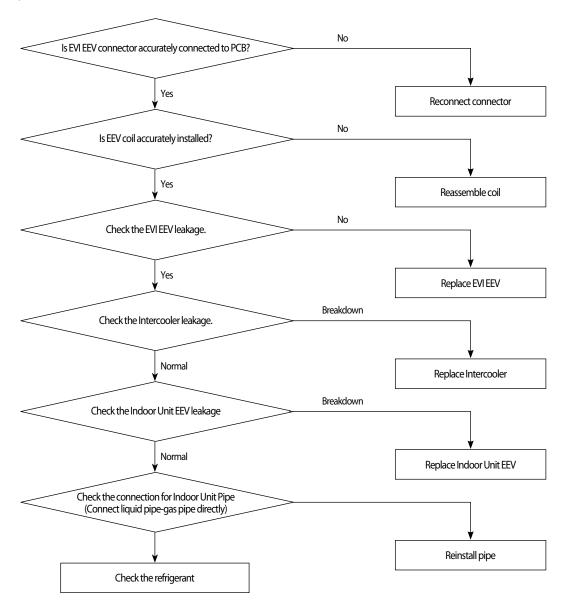

# 4-4-62 EVI EEV Open error

Outdoor unit display	E438
Indoor unit display	-
Criteria	. DSH <10 °C, EVI Out-in <= 0°C & frequency> 65Hz 40 minutes maintaining
Cause of problem	. EVI EEV and Intercooler leakage, excessive refrigerant amount, Outdoor Check Valve inserted opposite Indoor Unit EEV leakage, direct connection between Indoor Liquid Pipe and the Gas Pipe.

X Indoor EEV leakage can be easily checked during the operation of cooling operation and during the not-go-end blast operation. (In case it is normal, the EVA In and Out temperatures for the blast may rise.)

## 1. Cause of problem

 $<sup>\</sup>begin{tabular}{l} \hline \texttt{X} \textbf{ If cooling operation is operated for low temperature with excessive refrigerant amount, then the DSH may descend.} \\ \hline \end{tabular}$ 

# 4-4-63 Refrigerant Leakage Error

Outdoor unit display	E 4 3 9
Indoor unit display	-
Criteria	• Refer to the judgment method below
Cause of problem	• Leakage of refrigerant, simultaneous malfunction of pressure sensor

- Low-pressure sensor OPEN/SHORT error determination method
  - 1. Identifies from when power is supplied or 2 minutes after RESET, and only when set is stopped.
  - 2. An E439 error will occur if the input voltage standard ranges of  $0.5V \sim 4.95V$  of both the high- and low-pressure sensors are exceeded
  - 3. Will occur if the measured value of both high- and low-pressure sensors is  $1 \, kgf/cm^2G$

#### 1. Inspection method

The ▼ mark is the 1st pin on the PCB.

# 4-4-64 *E ЧЧロ , E ЧЧロ* : Prohibition of the operation of Compressor due to Ooutdoor Temperature

Outdoor unit display	E 441 (prohibit heating operation in outdoor temperature over 30°C) E 442 (prohibit heat filling operation in outdoor temperature over 15°C)
Indoor unit display	No sign
Criteria	E ソイロ: Right before an outdoor unit starts heating operation by On signal of an indoor Remocon, the error occurs and prohibits the operation in outdoor temperature over 30°C  E ソイン: Right before operating heat refrigerant filling mode by the K1 switch of an outdoor PCB, the error occurs and prohibits the operation in outdoor temperature over 15°C
Cause of problem	Operation Prohibition mode by the indoor temperature limit

### 1. How to check

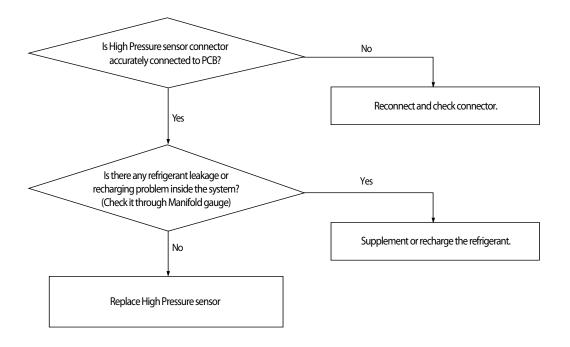

The above error code is not caused by a product's problem but a function to protect the product by limiting the available temperature range so please refer to the usable temperature range in the product manual.

If the error code is displayed despite a condition that does not belong to any of the above diagnosis methods, read the temperature sensor value of the outdoor inlet air with View Mode or S-net, and if the actual outdoor temperature is different, please replace the temperature sensor.

# 4-4-65 High Pressure Standard Not Met before Air Conditioning (Inability to Re-operate)

Outdoor unit display	E443					
Indoorunit display	$\times$ (Operation) ( Reservation) ( Blast) ( Filter) $\times$ (Defrost)					
Judgment Method	. Operation should be forbidden if High Pressure sensor value of the Main Unit before the pump down is started at 2.2kg/cm <sup>2</sup> g or below for air-conditioning and 1.0kg/cm <sup>2</sup> G or less for heating for three consecutive seconds. (Restarting operation is not possible, and an error displayed on the indoor unit.)					
Cause of problem	· Refrigerant leakage/fault in High Pressure sensor .					

## 1. Cause of problem

# 4-4-66 CCH Malfunction and Sump Sensor Miswiring Error

Outdoor Unit Display	E445
Indoor Unit Display	-
Judgment Method	• Refer to the judgment method below
Special Cause	CCH Connector PCB is not connected /Sump sensor compressor separated / Own problem of CCH

#### 1. Judgment Method

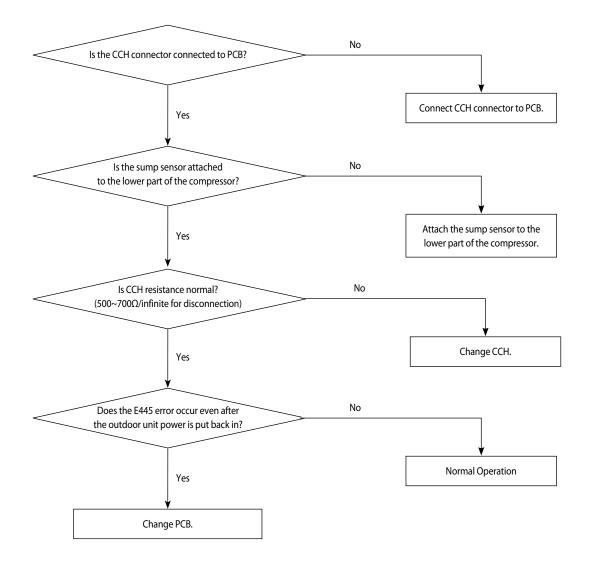

Tini = Sump temperature when entering the CH operation delay condition

Tlast= Sump temperature when maintaining CH operation delay for two hours

Outside Air Temperature Sensor Value: Outside air temperature when maintaining CH operation delay for two hours

- ① Tlast Tini < 2°C
- 2 Tlast < Outside Air Temperature Sensor Value +  $2^{\circ}$ C
- 3 Outside Air Temperature Sensor Value < 30°C

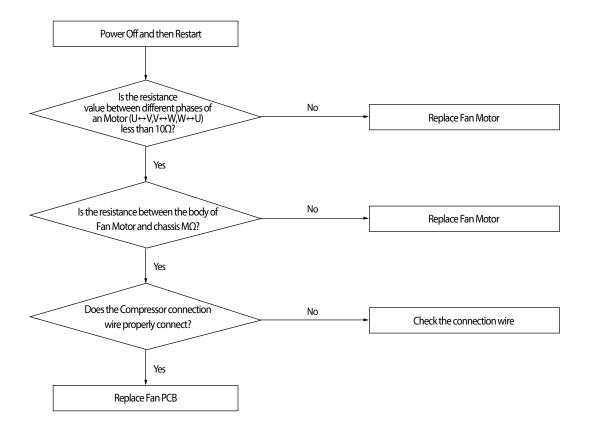

If 1 , 2 and 3 are satisfied at the same time, then display E445.

# 4-4-67 Fan starting error

Outdoor unit display	ETTE (FAN PCB(FAN1)) ETTE (FAN PCB(FAN2))
Judgment Method	Startup, and then if the speed increase is not normally.     Detected by H/W or S/W
Cause of problem	Compressor connection error     Defective Compressor     Defective PCB

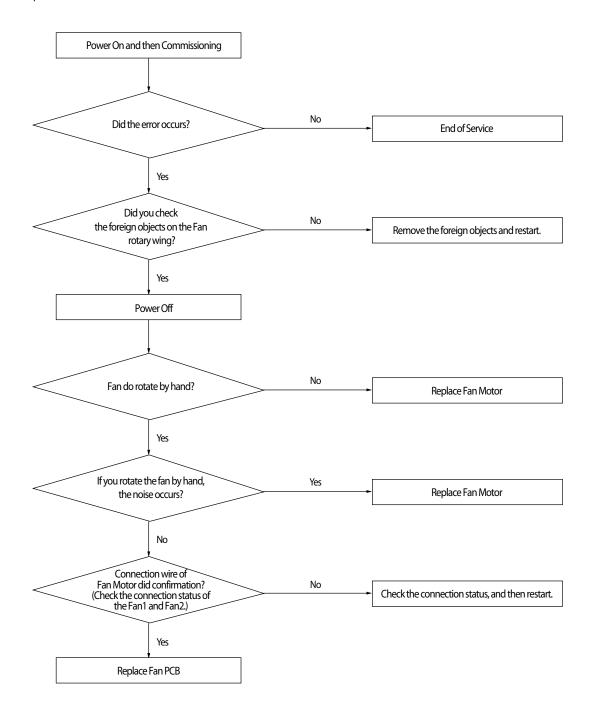

# 1. Cause of problem

## 4-4-68 Fan lock error

Outdoor unit display	E44B (FAN PCB(FAN1)) E34B (FAN PCB(FAN2))
Indoor unit display	-
Criteria	· Is checked symptoms by phase current of Fan Motor.
Cause of problem	Fan Motor connection error.     Defective Fan     Defective PCB

### 1. Cause of problem

# 4-4-69 Momentary Blackout error

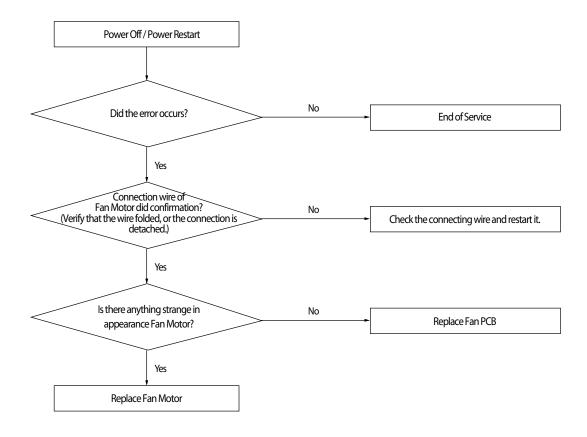

Outdoor unit display	E	150	7

Cause of problem	·Mome	ntary	stop o	of com	oresso	r due	to mor	nenta	ry blac	kout.								

1. Precautions: Replace Hub PCB or Main Hub Connection wire.

# 4-4-70 Outdoor Fan Motor overheating

Outdoor unit display	E 45 3 (FAN PCB(FAN1)) E 35 3 (FAN PCB(FAN2))
Indoor unit display	· Overheating due to the internal sensor of the Fan Motor.
Criteria	Defective connection wire     Defective Fan Motor     Defective PCB     Defective installation conditions
Cause of problem	<ul> <li>Fan Motor connection error.</li> <li>Defective Fan</li> <li>Defective PCB</li> </ul>

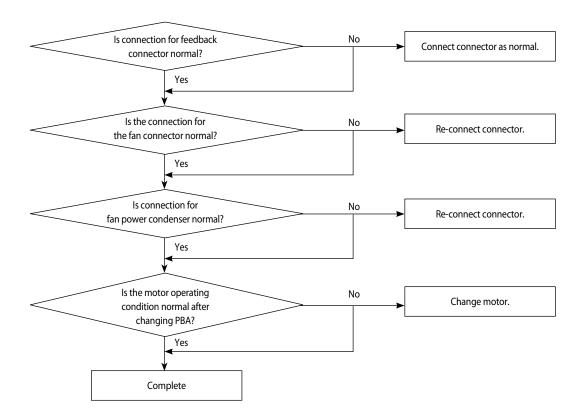

## 1. Cause of problem

# 4-4-71 Outdoor Unit Fan Motor RPM Error

Outdoor unit display	E454
Indoor unit display	-
Criteria	In case the number of the revolutions of the outdoor unit fan motor in motion is different by 100 rpm or more compared to the instructed value.
Cause of problem	Outdoor unit fan motor constrained or faulty of operation

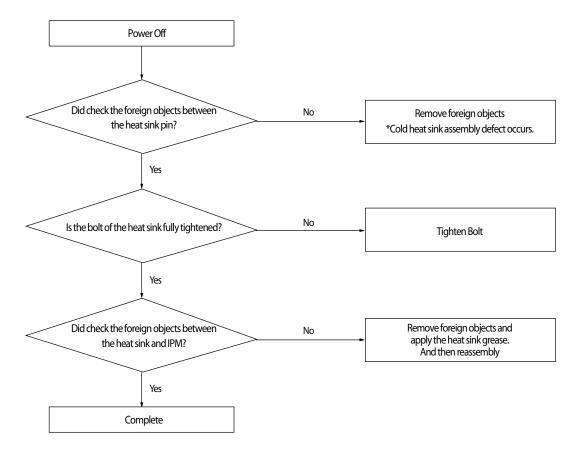

## 1. Inspection Method

## 4-4-72 Fan IPM Overheat error

Outdoor unit display	E 455 (FAN1 PCB) E 355 (FAN2 PCB)	
Criteria	· IPM internal temperature more than 85°C (E455, E355)	
Cause of problem		

## 1. Cause of problem

# 4-4-73 Over-Voltage Error of an Outdoor Fan Motor

Outdoor unit display	E456
Indoor unit display	-
Criteria	• When the current of an operating outdoor fan motor is more then 7A for 1 minute
Cause of problem	Outdoor fan motor lock or defect  Occurs by abrupt start or overload

### 1. How to check

- 1) Check if outdoor fan motor rotates or is locked
- 2) If it is not locked, the above error occurs due to overload and signals by abnormal operation, and it indicates the overload status. Thus, it is not breakdown.
- 3) Need to check if there is a problem with fan load status

## 4-4-74 Counter-Rotation Error of an Outdoor Fan Motor

Outdoor unit display	E457
Indoor unit display	-
Criteria	• When the rotational direction of an outdoor fan motor is counter-clockwise before operating
Cause of problem	Due to wind that can run the fan counter-wise

### 1. How to diagnose

1) Check if the start instruction of outdoor unit's fan is counter-clockwise

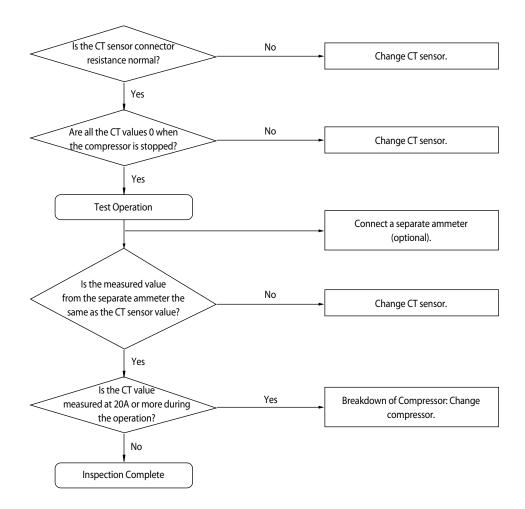

### 2. How to check

- 1) It is a signal to protect a motor by checking the operational condition of the outdoor unit's fan motor without power so as not to operate it in counter-clockwise condition.
- 2) Check if there is wind strong enough to force a fan to rotate counter-clockwise where the outdoor unit is installed.

# 4-4-75 £ 45₺ : Compressor Excess Current Error

Outdoor Unit Display	E458
Indoor Unit Display	$\times$ (Operation) $\bigcirc$ (Reservation) $\bigcirc$ (Blast) $\bigcirc$ (Filter) $\times$ (Defrost)
Judgment Method	• Error displayed if the CT sensor value of the relevant compressor is 20A or more and is maintained for more than 3 seconds.
Special Cause	Breakdown of compressor/Faulty CT sensor

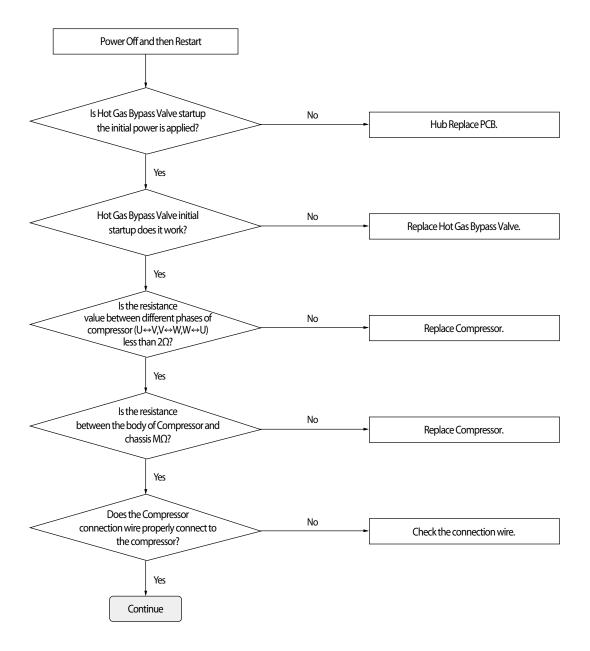

## 1. Cause of problem

# 4-4-76 Compressor starting error

Outdoor unit display	E45 (INVERTER1 PCB) E35 (INVERTER2 PCB)
Judgment Method	Startup, and then if the speed increase is not normally.     Detected by H/W or S/W.
Cause of problem	Compressor connection error     Defective Compressor     Defective PCB

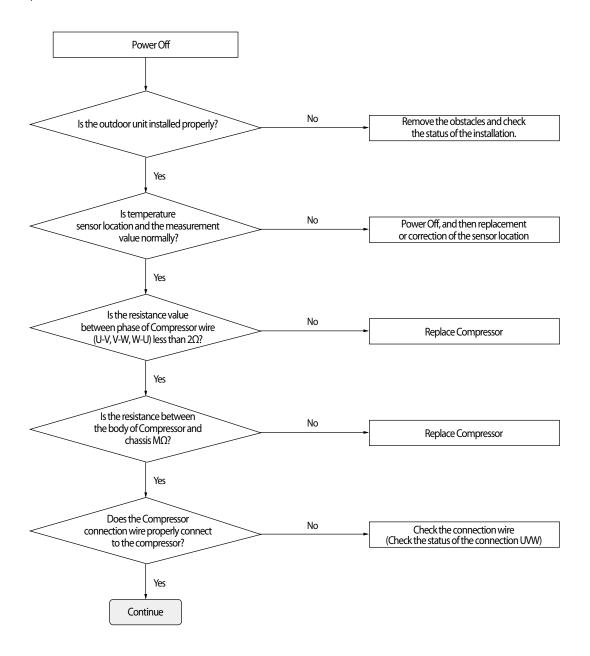

## 1. Cause of problem

### 4-4-77 Inverter Overcurrent error

Outdoor unit display	E464/E465 (INVERTER1 PCB) E364/E365 (INVERTER2 PCB)	
Judgment Method	<ul><li>Will occur if the overcurrent flowing in the IPM.</li><li>Detected by H/W or S/W</li></ul>	
Cause of problem	Installation defective     Comp. defective     PCB defective	Connection wire error     Motor defective

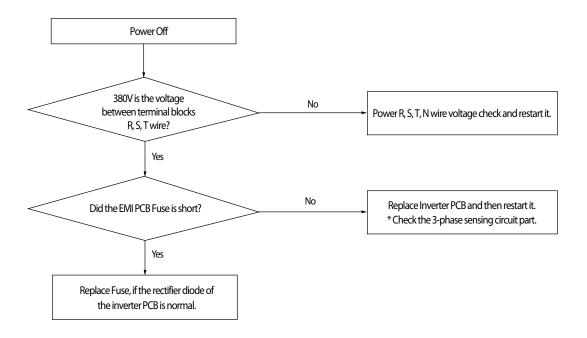

### 1. Cause of problem

# 4-4-78 Overvoltage / Low voltage error

Outdoor unit display	E 466 (INVERTER1 PCB) E 366 (INVERTER2 PCB)
Judgment Method	N-phase wiring error and EMI Fuse short.     DC-Link Overvoltage / Low voltage occurs.
Cause of problem	Check the input wiring     EMI Fuse short

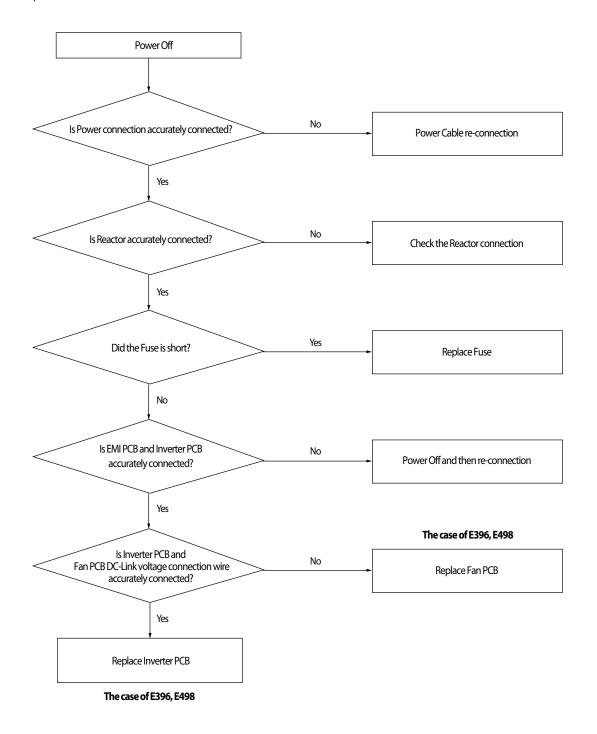

## 1. Cause of problem

# 4-4-79 DC Link voltage sensor error

Outdoor unit display	E459 (INVERTER1 PCB) E359 (INVERTER2 PCB) E495 (OUTDOOR FAN 1 PCB) E395 (OUTDOOR FAN 2 PCB)	
Judgment Method	· DC voltage detection: Judged as an error if the detected value is more than 2.8V or 0.2V less than	
Cause of problem	Input voltage defective     AC Power wiring error     Momentary Overvoltage / Low voltage occurs     PCB voltage sensing circuit defective	

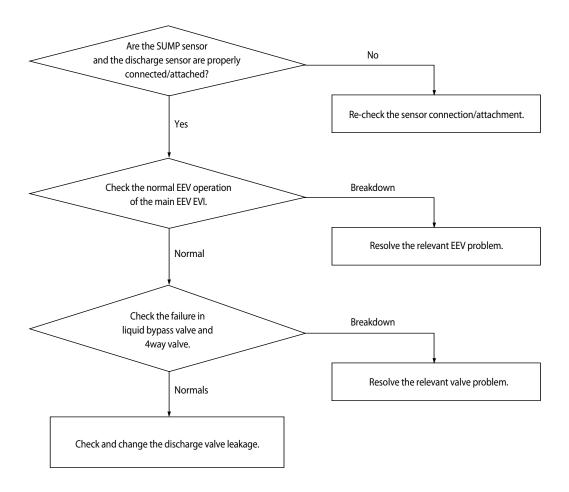

## 1. Cause of problem

# 4-4-80 Liquid Compression Prevention Control

Outdoor Unit Display	E477
Indoor Unit Display	-
Judgment Method	• SUMP temperature decrease & DSH < 5°C 25 min.
Special Cause	EVI EEV and super cooler, liquid bypass valve leakage, refrigerant overcharge, indoor unit EEV leakage, direct connection between indoor liquid pipe-gas pipe, faulty main EEV, and failure to operate compressor

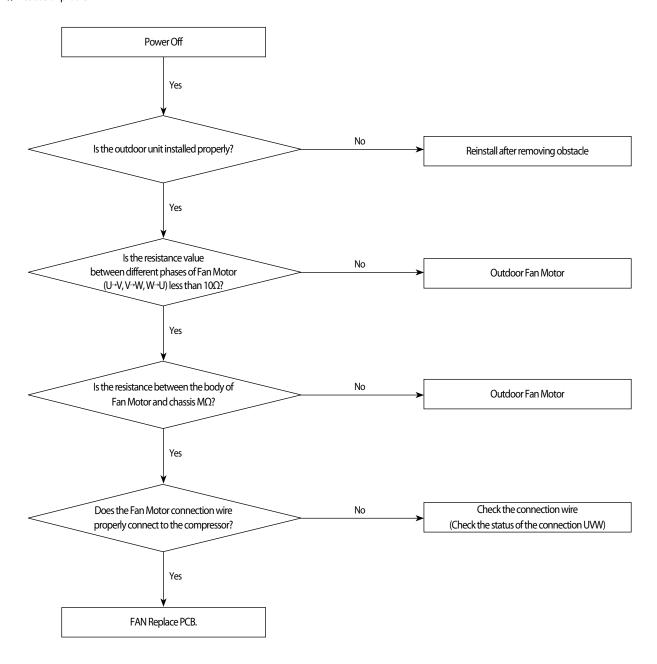

## 1. Inspection Method

## 4-4-81 Fan Motor Overcurrent error

Outdoor unit display	E 478/E 489 (FAN PCB(FAN1)) E 378/E 389 (FAN PCB(FAN2))	
Judgment Method	Occurs when overcurrent flows in the IPM.     Detected by H/W or S/W	
Cause of problem	Installation error     Defective Comp     Defective PCB	Connector error     Defective Motor

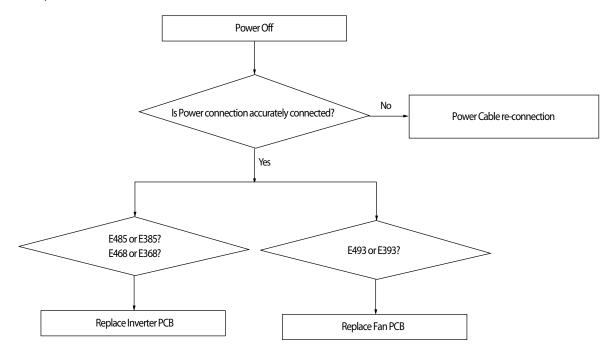

## 1. Cause of problem

	E468 INVERTER1 PCB(Output Current sensor)	
	E 368 INVERTER 2 PCB(Output Current sensor)	
	E493 OUTDOOR FAN PCB (FAN1 Output Current sensor)	
	E393 OUTDOOR FAN PCB (FAN2 Output Current sensor)	
Judgment Method	· Sensor Output detection: Judged as an error if the detected value is more than 2.8V or 0.2V less than	
Cause of problem	· Input voltage defective	
	· PCB voltage sensing circuit defective	

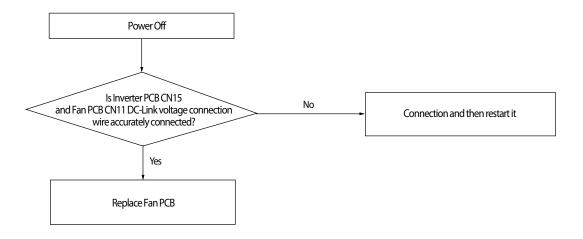

## 1. Cause of problem

# 4-4-83 Outdoor Fan PCB Overvoltage / Low voltage error

Outdoor unit display	E486
Judgment Method	N-phase wiring error and EMI Fuse short.     DC-Link Overvoltage / Low voltage occurs.
Cause of problem	Check the input wiring     EMI Fuse short

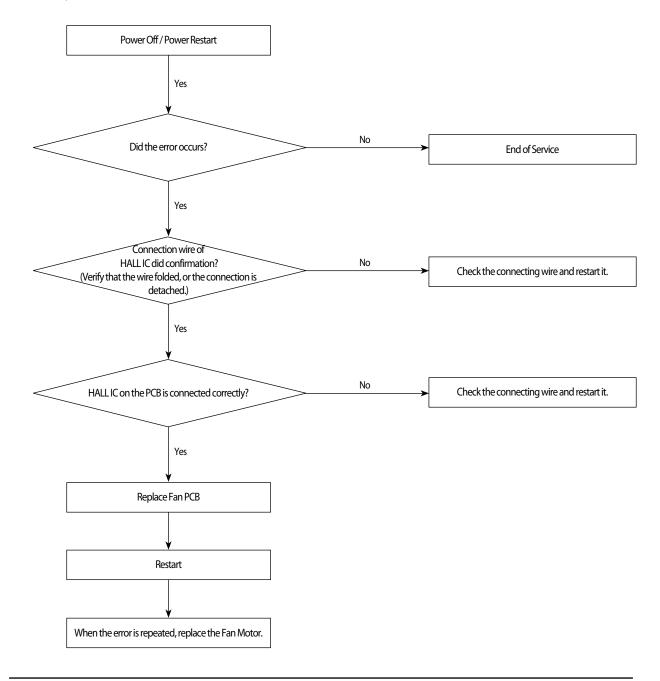

## 1. Cause of problem

# 4-4-84 Hall IC(Fan) error

Outdoor Unit Display	E 187 (FAN PCB(FAN1)) E 387 (FAN PCB(FAN2))
Indoor Unit Display	-
Judgment Method	<ul> <li>Connection status error.</li> <li>Hall IC wire disconnection.</li> <li>Defective circuit parts and defective manufacturing.</li> <li>Fan Motor defective.</li> </ul>
Special Cause	EVI EEV and super cooler, liquid bypass valve leakage, refrigerant overcharge, indoor unit EEV leakage, direct connection between indoor liquid pipe-gas pipe, faulty main EEV, and failure to operate compressor

## 1. Cause of problem

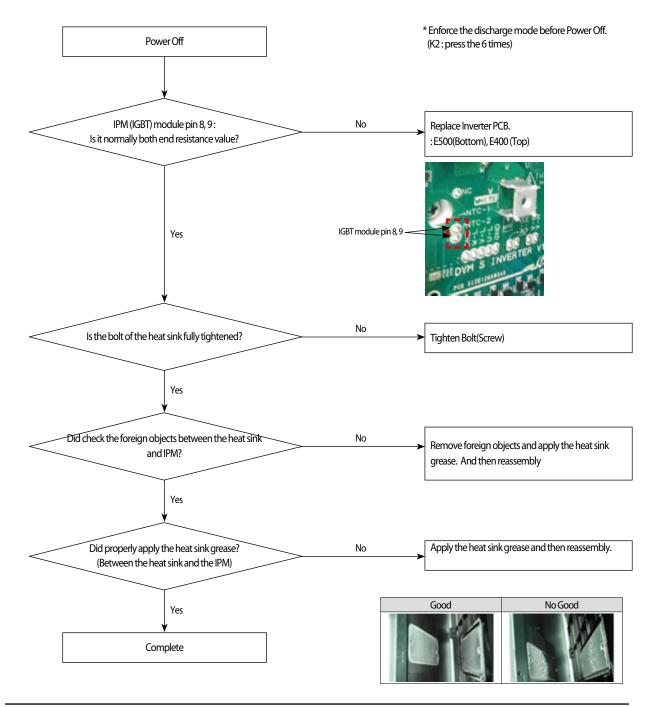

#### 4-4-85 Inverter Overheat error

Outdoor unit display	ESCO (INVERTER1 PCB) ESCO (INVERTER2 PCB)	
Judgment Method	· IGBT module internal temperature : 105°C more than (E500, E400)	
Cause of problem	Cooling Pin and the IGBT junction part assembly defective.     Refrigerant cooling heat sink and refrigerant piping assembly defective.     Assembled bolt defective.	

Both end resistance values of IGBT module pin(8, 9 pin)

NTC [ohm]	AD[V]	Temperature [°C]	NTC [ohm]	AD [V]
9000	2.58	100	500	0.55

### 1. Cause of problem

# 4-4-86 Model mismatching of Indoor unit.

Outdoor unit display	E563
Judgment Method	<ul> <li>Prior to July 2011, if the software version of the indoor unit.</li> <li>Prior to July 2011, if the software version of the indoor unit.</li> </ul>
Cause of problem	Check the software version of the indoor unit.     Check whether the support of the indoor unit.

## 1. Cause of problem

### 4-4-87 Breakdown of an EEV(1st)

#### 1. How to diagnose

Detect only on cooling operation. (No detection during heating operation.)

During cooling operation, the temperature of the inlet or outlet ducts of heat exchanger is kept lower than 0°C for more than 20 minutes without cessation

#### 2. How to check

- 1) Check if the wire of an electronic expansion valve is correctly connected to the PCB of indoor unit.
- 2) Check if the coil of an electronic expansion valve is correctly plugged into the main body.
- 3) Check if there is any rust on the surface of the coil of an electronic expansion valve with the naked eye, and then check the resistance between each terminal to find any wire breaking or short circuit.
- 4) Press the RESET KEY (K3) of the outdoor unit then see if the same error occurs.
  - In case of closure problem, operate the indoor unit in which the error has occurred.
  - In case of opening problem, please do not operate the indoor unit in which the error has occurred.
- 5) If there is no problem with the above checkup items, replace the electronic expansion valve of the troubled indoor unit.
  - As an electronic expansion valve replacement is tricky work that requires collecting refrigerants in all systems, please make sure to check the above items before replacement.

#### 4-4-87 Breakdown of an EEV closure

#### 1. How to diagnose

1) During cooling operation (It must satisfy each of the following conditions for over 20minutes.)

Tair in - Teva in in ≥ 4°C	ОК
Tair in - Teva out in ≥ 4°C	ОК
Tcond, out - Tair, out > 3°C	NO
Compressor in operation & Indoor unit operation & Thermo On	ОК
Error details	EEV closure breakdown

- 2) During heating operation (It must satisfy each of the following conditions for over 20minutes.)
  - · When more than 2 indoor units are on Thermo On heating operating.
  - · When average high pressure is over 25 kg/cm<sup>2</sup>G
- · 5 minutes after finishing Safety Start.
- $\cdot$  Keep indoor units' T(Eva\_IN)<T(Room)+3°C and T(Eva\_Out)<T(Room)+3°C condition for more than five minutes.

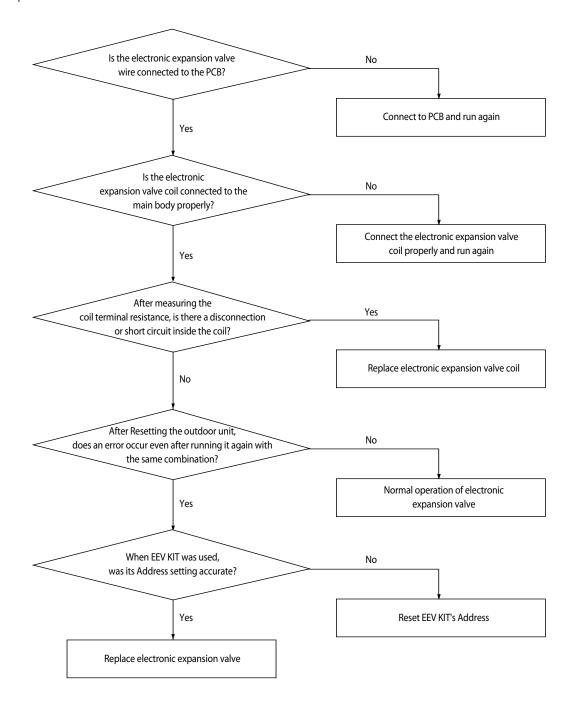

#### 2. How to check

- 1) Check if the wire of an electronic expansion valve is correctly connected to the PCB of indoor unit.
- 2) Check if the coil of an electronic expansion valve is correctly plugged into the main body.
- 3) Check if there is any rust on the surface of the coil of an electronic expansion valve with the naked eye, and then check the resistance between each terminal to find any wire breaking or short circuit.
- 4) Press the RESET KEY (K3) of the outdoor unit then see if the same error occurs.
  - In case of closure problem, operate the indoor unit in which the error has occurred.
  - In case of opening problem, please do not operate the indoor unit in which the error has occurred.
- 5) If there is no problem with the above checkup items, replace the electronic expansion valve of the troubled indoor unit.
  - As an electronic expansion valve replacement is tricky work that requires collecting refrigerant in all systems, please make sure to check the above items before replacement.

# 4-4-88 Electronic expansion valve closing malfunction (2nd stage)

Outdoor unit display	1 <sup>st</sup> stage inspection: $P \cap D \cap C$ (only displays on outdoor unit)  2 <sup>nd</sup> stage inspection: $E \cap C \cap C$ ( $X \times X \times C$ )	
Indoor unit display	×(Operation)	
Criteria	Please refer to determining method below	
Cause of problem	Faulty indoor unit electronic expansion valve action (valve will not open)     Address setup error in indoor unit (RAC) using EEV KIT	

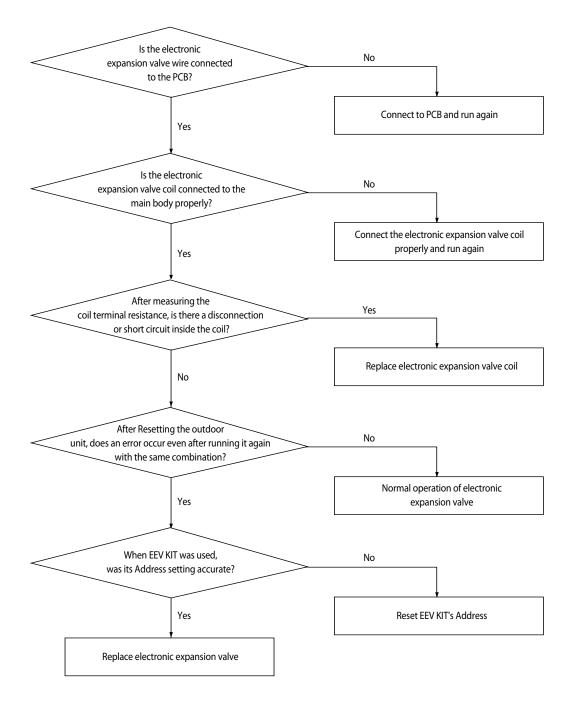

### 1. Inspection Method

# 4-4-89 Electronic expansion valve opening malfunction (2nd stage)

Outdoor unit display	1 <sup>st</sup> stage inspection: $P \cap B \cap B$ (only displays on outdoor unit)  2 <sup>nd</sup> stage inspection: $E \cap B \cap B \cap B \cap B$ (x x x: indoor unit address of where error occurred)	
Indoor unit display	×(Operation)	
Criteria	Please refer to determining method below	
Cause of problem	Faulty indoor unit electronic expansion valve action (refrigerant will leak into the stopped indoor unit)     Address setup error in indoor unit (RAC) using EEV KIT	

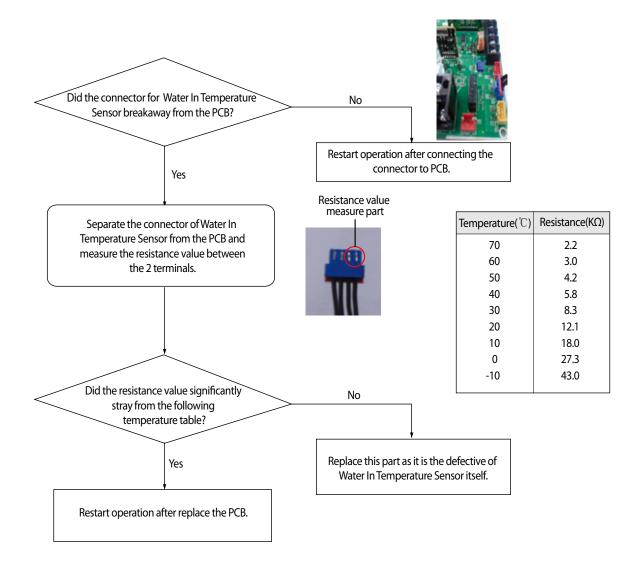

### 1. Inspection Method

# 4-4-90 Hydro Unit Water In Temperature Sensor Error (Open/Short)

Outdoor unit display	$F $ $\Pi : H \to H $ XXX (xxx : Address of Indoor Unit that error occurred))
Indoor unit display	E90 I
Criteria	Refer to the judgment method below.
Cause of problem	Hydro Unit Water In Temperature Sensor Open/Short error of xxx

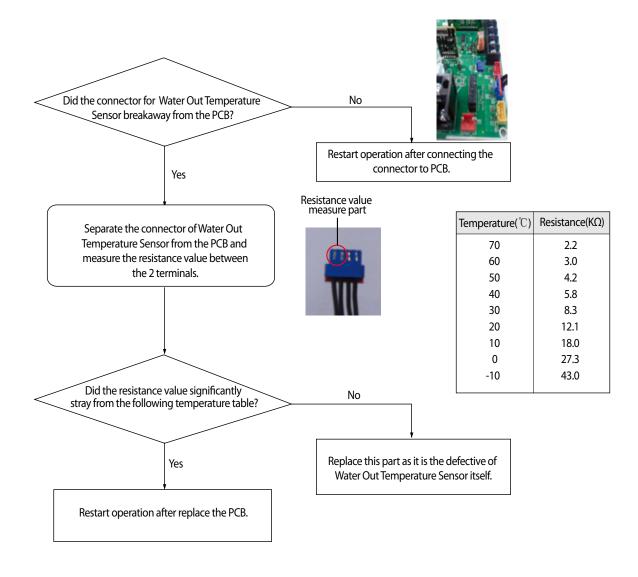

### 1. Inspection Method

# 4-4-91 Hydro Unit Water Out Temperature Sensor Error (Open/Short)

Outdoor unit display	$F $ $\square \square \square \longrightarrow \square$ XXX (xxx: Address of Indoor Unit that error occurred))
Indoor unit display	E902
Criteria	Refer to the judgment method below.
Cause of problem	Hydro Unit Water Out Temperature Sensor Open/Short error of xxx

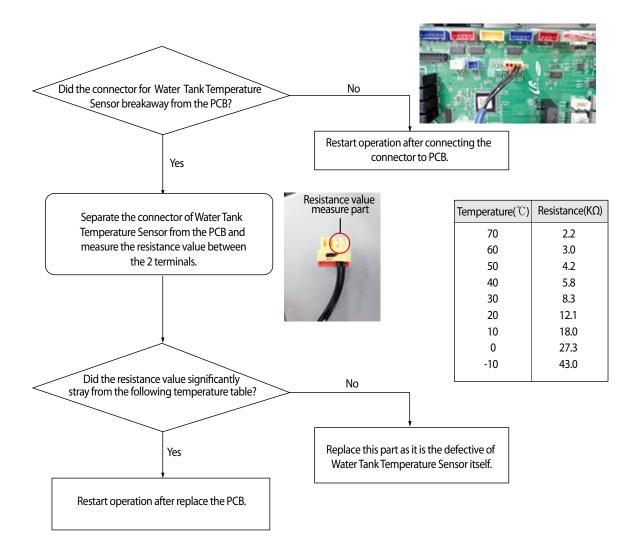

### 1. Inspection Method

# 4-4-92 Hydro Unit Water Tank Temperature Sensor Error (Open/Short)

Outdoor unit display	$F $ $\square$ $\square$ $\square$ $\square$ $\square$ $\square$ $\square$ $\square$ $\square$
Indoor unit display	E904
Criteria	Refer to the judgment method below.
Cause of problem	Hydro Unit Water Tank Temperature Sensor Open/Short error of xxx

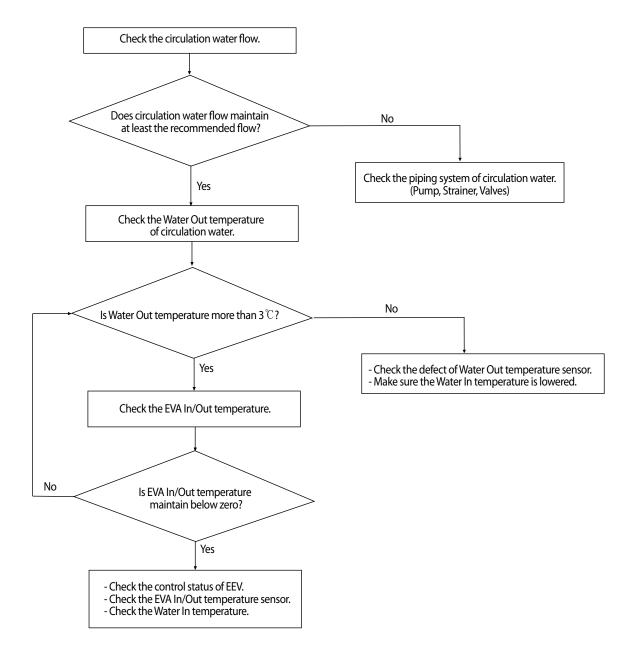

### 1. Inspection Method

# 4-4-93 Emergency Error (Check the Water Piping Equipment)

Outdoor unit display	$F $ $\Pi $ $\Pi   \longrightarrow \Pi   $ XXX (xxx: Address of Indoor Unit that error occurred))
Indoor unit display	E907
Criteria	• More than 2 hours Heating / Hot water operation : Water In temperature does not change more than 5°C .
Cause of problem	Heating / Hot water operation of xxx Hydro Unit : There is no change in the water temperature.

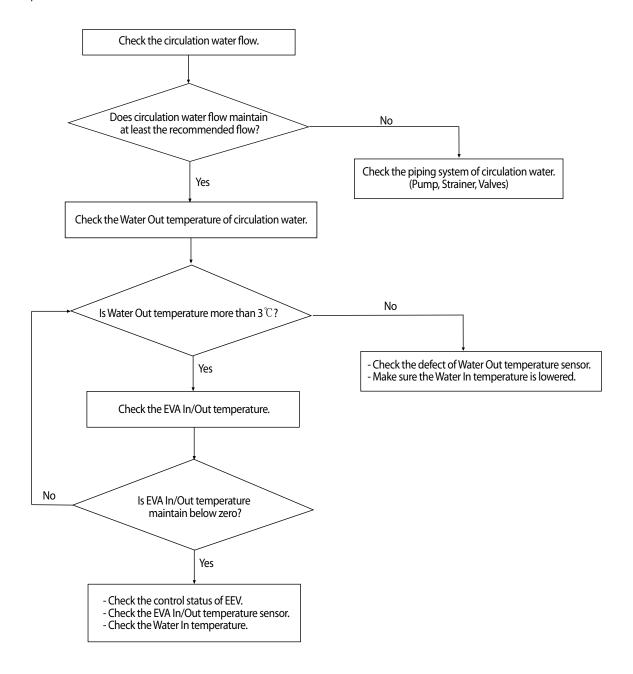

### 1. Inspection Method

# 4-4-94 Error to prevention from freezing and bursting of Heat Exchanger

Outdoor unit display	$F908/F909 \leftrightarrow R XXX \text{ (xxx : Address of Indoor Unit that error occurred))}$
Indoor unit display	<b>E 908/E 909</b> (Repeats six times)
Criteria	. Water Out temperature is less than 3°C . . EVA In/Out maintains the temperature below zero. (* During the cooling operation, can be detected)
Cause of problem	Low Heat Exchanger internal temperature of xxx Hydro Unit. (Low flow / Low water temperature)

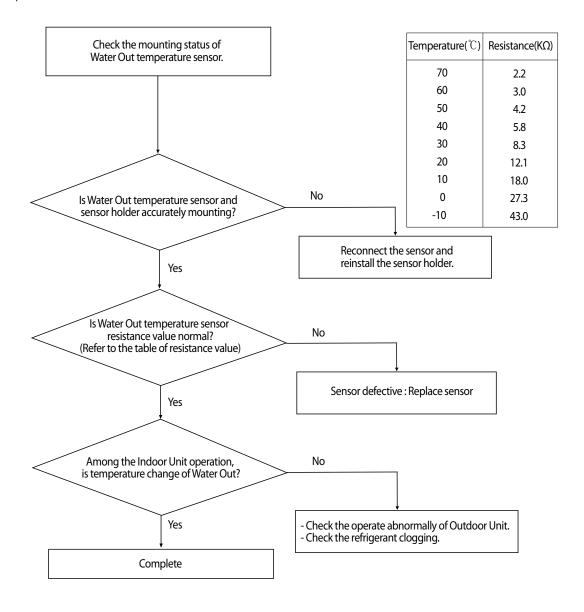

### 1. Inspection Method

## 4-4-95 Breakaway of Water Out temperature sensor

Outdoor unit display	$FG : \mathcal{A} \hookrightarrow \mathcal{A} \times \times$
Indoor unit display	E9 10
Criteria	. Water Out temperature before and after the operation : Temperature difference is less than $2^{\circ}\text{C}$ .
Cause of problem	Water Out temperature sensor breakaway of xxx Hydro Unit.

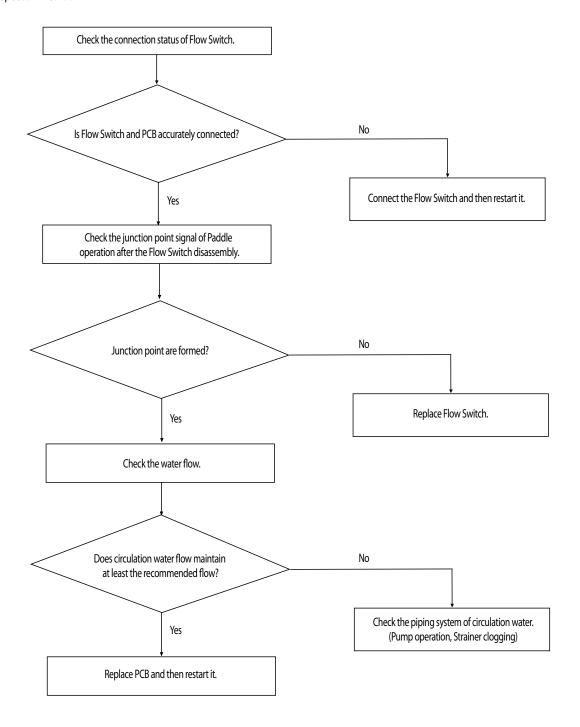

#### 1. Inspection Method

# 4-4-96 Breakaway of Flow switch

Outdoor unit display	$FG / //FG / G \rightarrow F$ XXX (xxx : Address of Indoor Unit that error occurred)
Indoor unit display	<b>E9 1 1/E9 13</b> (Repeats six times)
Criteria	. Output status from Pump signal : Does not detect the signal of Flow Switch, more than 5 seconds.
Cause of problem	Does not detect the signal of xxx Hydro Unit Flow Switch. (Flow shortage of Water piping system)

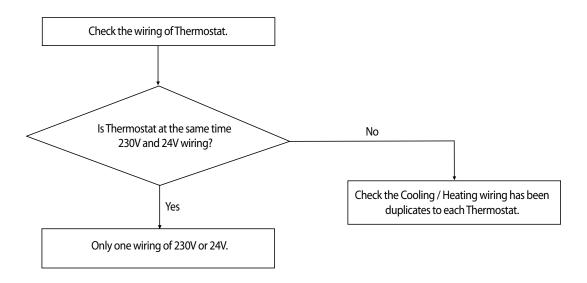

# 1. Inspection Method

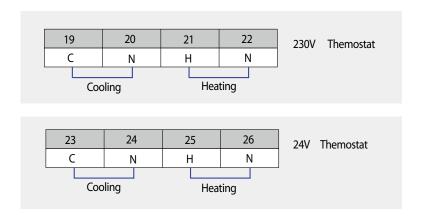

## 4-4-97 Thermostat Wiring Error

Outdoor unit display	$FG / H \rightarrow R$ XXX (xxx : Address of Indoor Unit that error occurred)			
Indoor unit display	E9 /4			
Criteria	Heating / Cooling signal of Thermostat at the same time input.			
Cause of problem	Thermostat wiring error of xxx Hydro Unit.			

#### 1. Inspection Method

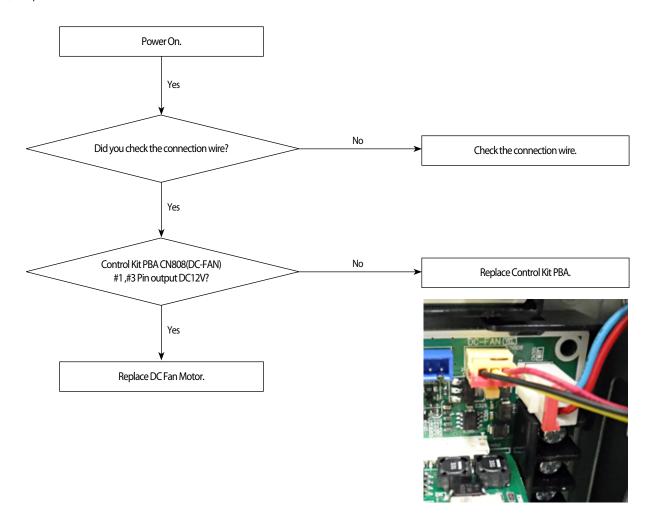

#### 4-4-98 DC FAN Motor Feedback Error

Outdoor unit display	$F_{3} / 5 \rightarrow F_{3} \times \times$			
Indoor unit display	E9 15			
Criteria	Refer to the judgment method below.			
Cause of problem	DC FAN connector defects and connection is not DC FAN motor defective. Control kit PBA defective.			

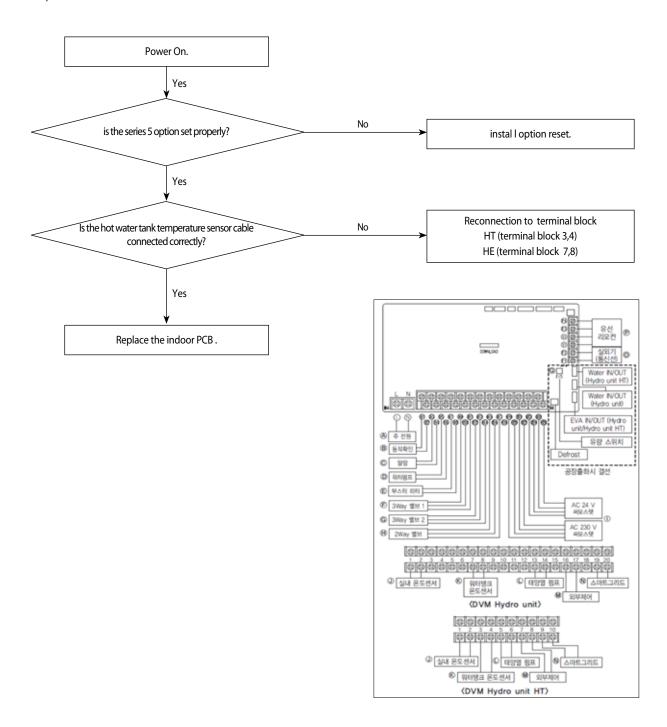

#### 1. Inspection Method

#### 4-4-99 Water Tank Sensor defective

Outdoor unit display	$FG : \mathcal{T} \hookrightarrow \mathcal{F} \times \mathbb{R} \times \mathbb{R}$ XXX (xxx : Address of Indoor Unit that error occurred)			
Indoor unit display	E9 /7			
Criteria	Refer to the judgement method below.			
Cause of problem	Water Tank Sensor defective			

#### 1. Inspection Method

#### **NOTES**

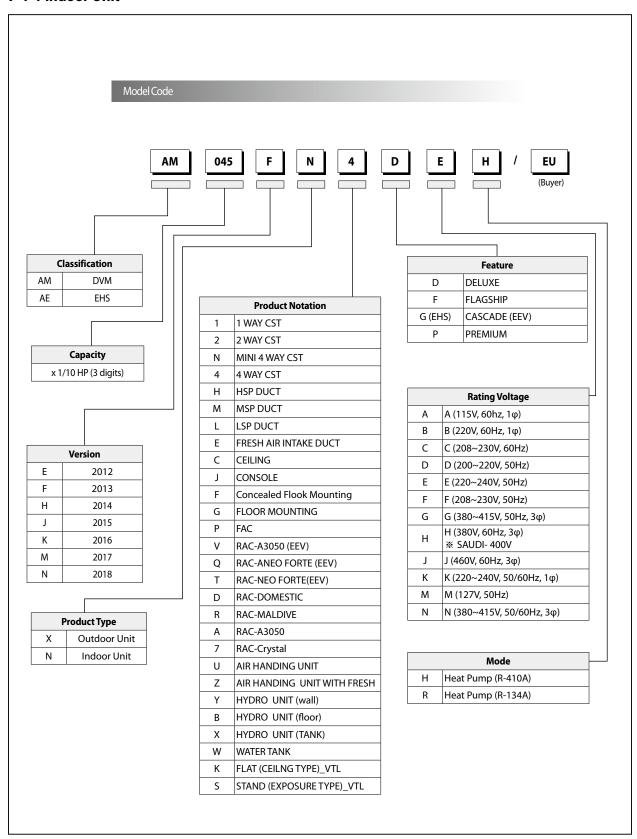

- 1. This wiring diagram applies only to the indoor unit.
- 2. Symbols show as follow:
  - BLK: black, RED: red, BLU: blue, WHT: white, YEL: yellow, BRN: brown, SKY: sky blue, GRN: green
- 3. For connection wiring indoor-outdoor transmissioin F1-F2, indoor-wired remote controller transmission F3-F4.
- 4. Protective earth (SCREW).

This Document can not be used without Samsung's authorization.

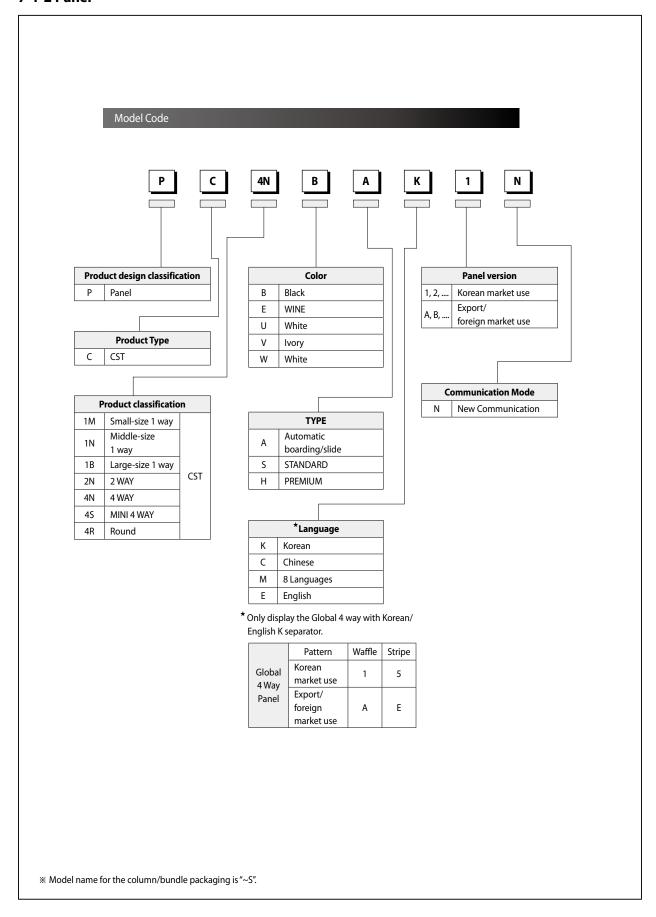

## 7. Reference Sheet

#### 7-1 Index for Model Name

#### 7-1-1 Indoor Unit

#### 7-1-2 Panel

#### 7-2 Pump-down Method

#### 7-2-1 Precautions for Pump-down

- 1. If the pressure is kept low for a long time to completely replenish the refrigerant of the pipe during the pump-down, then the compressor may be damaged. Therefore, close the valve immediately if the pressure goes below 2kg/cm².g.
- 2. If the length of the pipe is too long or the outside temperature is too high, then it may not be able to pump down all of the refrigerant. In this case, use an empty refrigerant container which can be used for recharge to place some of the system refrigerant inside the container. The pump down can be easily carried out if only the remaining refrigerant is pumped down.

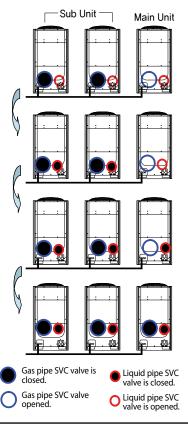

Please use a rechargeable container for exclusive use when putting the refrigerant in the container.
 Accidents such as explosions can happen and result in damage if normal refrigerant containers are used after illegal modification.

#### 7-2-2 For Single Installation of Outdoor Unit (Only One Outdoor Unit Installed)

- 1. Close the liquid pipe SVC valve.
- 2. Press the K2 Button on the PCB of the main outdoor unit. ("K7" mark displayed on the outdoor unit PCB LED.)
- Observe for low pressure by using the K4 button's view mode once the compressor starts operating.
   (If the first number of the LED is "4," then the following three digits represent the low pressure, expressed up to the first decimal point.)
  - Example:  $41.22 \rightarrow 4$  means the value of the low pressure, and 122 means that the low pressure is  $12.2 \text{kg/cm}^2$ ,g.
- 4. If the low pressure goes below around 2kg/cm²,g, then immediately close the SVC valve for the gas and finish the pump-down operation.
  - (Finish the pump-down operation, press K2 button two more times, or reset the operation by pressing the K3 button once more.)

#### 7-2-3 When Two or More Outdoor Units are Installed

- 1. Close the gas valves of each sub unit.
- Press the K2 button of the outdoor unit PCB three times. At this time, K7 will be displayed on the PCB LED. After pressing the button, wait for about 20~30 minutes once the main unit compressor starts operating.
- 3. Close the liquid pipe valves of each sub unit.
- 4. Close the liquid pipe valves of the main unit, and observe for low pressure as in the case of a single outdoor unit.
- 5. Close the gas valve of the main unit if the pressure drops down, and then finish the pump-down operation mode.

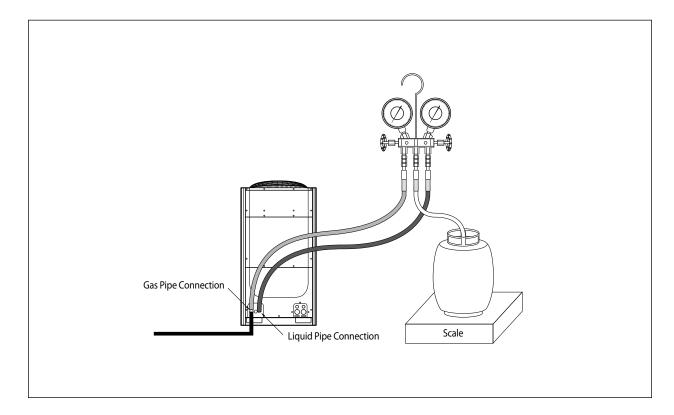

#### 7-3 How to Put Refrigerant in Refrigerant Container

#### 7-3-1 How to put refrigerant in container before pump-down

- 1. Prepare a rechargeable exclusive refrigerant container, a scale, and a Manifold gauge.
- 2. Check the amount of refrigerant remaining in the overall system at the time.
- 3. Connect the refrigerant container to the outdoor unit as shown in the following figure, and operate only about 50% of the total indoor units in air conditioning mode.
- 4. Check the high pressure from the Manifold gauge 10 minutes after the air conditioning begins operation.

  Reduce the number of indoor units in operation if the high pressure goes above 30kg/cm2,g. to lower the high pressure below 30kg/cm²,g.
- 5. Check that the high pressure goes below 30kg/cm²,g, and open the Manifold gauge connected to the liquid pipe, as well as the refrigerant container valve, so that the refrigerant flows from the liquid pipe to the refrigerant container.
- 6. Check the changes in the weight of the container using the scale. Once the desired amount of refrigerant is filled up inside the container, close the valves, and then remove the Manifold gauge.
- 7. The amount of refrigerant that can be contained inside the container is about 50% of the amount of refrigerant inside the over all system.
- 8. Please take extra caution by precisely determining the amount of the refrigerant that can be put in each container so that too much refrigerant is not contained in the container.
  - The weight must be measured by using a scale to avoid putting more refrigerant than the amount originally contained in the container.
