

NEW FLOOR CONSOLE TYPE

Panasonic

New Floor Console

- Can be installed on R22 pipings
- More efficient than ever and higher savings
- Heating mode down to -20°C with high efficiency

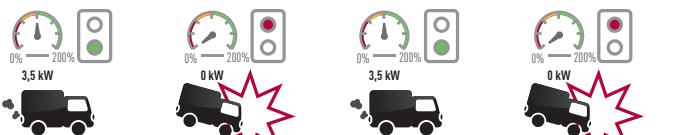

INVERTER

Inverter technology exceptional energy-saving performance

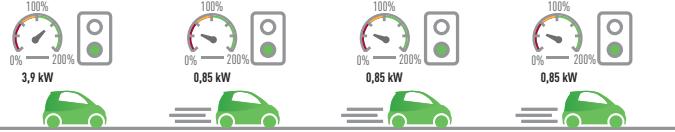

Panasonic Inverter air conditioners are designed to give you exceptional energy savings and performance, whilst also ensuring you stay comfortable at all times. At the start up of an air conditioner's operation, powerful operation is required to reach the set temperature. After the set temperature is reached, less power is required to maintain it. A conventional non-Inverter air conditioner can only operate at a constant speed which is too powerful to maintain the set temperature. Thus, in attempting to achieve this, it switches the compressor ON and OFF repeatedly. This results in wider temperature fluctuations leading to wasteful consumption of energy. The Panasonic Inverter air conditioner varies the rotation speed of the compressor. This provides a highly precise method of maintaining the set temperature. Unlike a conventional non-Inverter air conditioner which consumes a lot of energy, Panasonic Inverter air conditioner reduces wasteful operation - giving you energy savings of up to 50%¹ on cooling mode.

The advantages of inverter air conditioners. Comparing Inverter and non-Inverter air conditioners

NO INVERTER

INVERTER

NO INVERTER Slow to start. Takes longer to reach the temperature set point. The temperature oscillates between the two extremes and never stabilises. The temperature falls and then rises quickly, leading to a consumption peak.

INVERTER Rapidly reaches the desired temperature. Adjusts the temperature: more comfort and greater savings. Keeps the temperature comfortable all the time.

Why Panasonic Inverter is better?

Panasonic leads production of compressors around the world. This fact is giving tremendous technology advantage in the core part of heat pumps. That's why Panasonic Inverter provides quicker response, thanks to higher maximum performance, meanwhile lower speed level of compressor allows to keep temperature with minimum effort. Additionally Panasonic provides 5 years warranty in compressor.

COOLING
MODEL

Electricity Consumption Comparison. During Cooling Up To 50 %¹ energy savings.

1. Comparison of 1.5 HP Inverter model and 1.5 HP No Inverter model (Cooling)
Outside temperature: 35 °C / 24 °C. Remote setting temperature: 25 °C with Fan speed (High) Vertical Airflow direction: Auto, Horizontal Airflow direction: Front.
Total power consumption amount are measured for 8 hours from starting. At Panasonic Amenity Room (size: 16.6 m²) This is the maximum energy savings value, and the effect differs according to conditions in installation and usage.

FLOOR CONSOLE TYPE

INVERTER+

KIT-E9-PFE // KIT-E12-PFE // KIT-E18-PFE

Technical focus

- New!** This units can be installed on R22 pipings
- More efficient than ever for improved energy consumption and higher savings
- Heating mode down to -20°C with high efficiency
- Double airflow for better efficiency
- Powerful mode for quick temperature setting
- R410A refrigerant gas

Healthy air

- Soft dry operation mode
- Odour-removing function

Energy, efficiency and ecology

- Maximum efficiency Inverter system
- R410A refrigerant gas

Comfort

- Super Quiet
- Powerful mode
- Automatic vertical airflow control
- Hot start mode
- Automatic restart

Ease of use

- Real time clock with single ON&OFF timer
- User friendly infrared remote control

Easy installation and maintenance

- Removable, washable panel
- Maximum connection distance 15m (E9, 12), 20m (E18)
- Maintenance access through the top panel of the outdoor unit
- Self-diagnosis function

Included with the indoor unit

CU-E9PFE
CU-E12PFE

CU-E18PFE

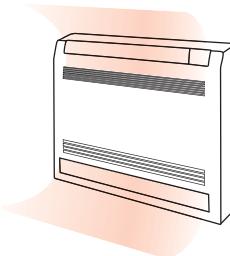

Upper & lower vane blow

Console designed for discreet integration on walls, and for high performance, specifically in heat mode even when the outside temperature is as low as -15°C.

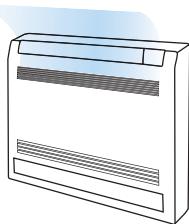

Double airflow for improved comfort and temperature dispersion: through the top for an efficient cooling mode, through the bottom for quick heating.

Upper & lower vane blow

Optimum air flow from the top and bottom of the unit assures that even your feet are kept comfortably warm.
(Only during heating)

Upward and downward air flow warms the whole room uniformly

Upward air flow efficiently cools the entire room
